2.1 Namespace List

Here is a list of all namespaces with brief descriptions:

[USU](#)

TODO: Make some proper exceptions [17](#)

Chapter 3

Class Index

3.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Beagle_GPIO	32
MotorProgrammer::Command	40
cPWM	41
USU::GX3Command	48
USU::SamplingSettings	98
USU::SetCountinuousMode	105
USU::GX3Packet	53
USU::AccAngMag	25
USU::AccAngMagOrientationMat	28
USU::Quaternion	88
USU::RawAccAng	91
I2CBus	56
IMU	60
USU::MinImu	74
L3G	66
USU::Lock	68
LSM303	69
USU::Max127	72
USU::Motor	77
USU::MotorControl	78
USU::RtThread	94
MotorProgrammer	82
USU::GX3Communicator	50
USU::PeriodicRtThread	86
DataCollector	45
DataCollector	45
MyThread	84
USU::KalmanFilter	62

USU::ScopedLock	103
USU::Semaphore	104
SharedObject	108
USU::SharedQueue< T >	109

Chapter 4

Class Index

4.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

USU::AccAngMag	Representation for receiving acceleration, angular rate and magnetometer packets	25
USU::AccAngMagOrientationMat	Representation for packets containing the 3 sensor vectors and orientation matrix This class can be used with the commands which return 3 Vectors and a 3x3 Matrix. The units are:	28
Beagle_GPIO	Wrapper class to access the GPIOs of the BeagleBone	32
MotorProgrammer::Command	Struct representing a single command point	40
cPWM	Wrapper class to access the PWM-devices of the BeagleBone	41
DataCollector	Simple class which manages the motors and collects data at an periodic intervall	45
USU::GX3Command	Base class for commands send to the 3DM-GX3-25	48
USU::GX3Communicator	50
USU::GX3Packet	Abstract base class for received packets	53
I2CBus	Wrapper class for I2C-bus communication	56
IMU	Virtual base class for IMU	60
USU::KalmanFilter	Represents the Periodic Thread class for state estimation	62

L3G	Class to manage the communication to the L3G gyroscope via the I2C-bus	66
USU::Lock	Wrapper class for pthread mutexes	68
LSM303	Class to manage communication to the LSM303 compass via the I2C-bus	69
USU::Max127	Class representing the MAX127 ADC	72
USU::MinImu	Class to manage the communication to the Pololu MinIMU9	74
USU::Motor	Class which represents a motor	77
USU::MotorControl	Represents the class for motor control	78
MotorProgrammer	Class which reads the input file and runs the trajectory for each motor	82
MyThread	84
USU::PeriodicRtThread	TODO: Make some proper exceptions	86
USU::Quaternion	Representation for receiving the Quaternion representation from the IMU	88
USU::RawAccAng	Representation for receiving (raw) acceleration & angular rate packets	91
USU::RtThread	Abstract wrapper class for the pthread library with RT-priority	94
USU::SamplingSettings	Represents the "Sampling Settings" command	98
USU::ScopedLock	Provides a helper class for Scoped Mutexes	103
USU::Semaphore	Wrapper class for semaphores	104
USU::SetContinuousMode	Represents the "Set continuous mode" command	105
SharedObject	108
USU::SharedQueue< T >	Wrapper class to make std::queue thread safe	109

Chapter 5

Chapter 6

Module Documentation

6.1 Utility classes for threading with pthread

Collaboration diagram for Utility classes for threading with pthread:

Classes

- class [USU::Lock](#)
Wrapper class for pthread mutexes.
- class [USU::ScopedLock](#)
Provides a helper class for Scoped Mutexes.
- class [USU::PeriodicRtThread](#)
TODO: Make some proper exceptions.
- class [USU::RtThread](#)
Abstract wrapper class for the pthread library with RT-priority.
- class [USU::Semaphore](#)
Wrapper class for semaphores.
- class [USU::SharedQueue< T >](#)
Wrapper class to make std::queue thread safe.

6.1.1 Detailed Description

Yadsjflsfjlk yadadada dadadljfsfj

6.2 Classes related to communication with Pololu MinIMU

Collaboration diagram for Classes related to communication with Pololu MinIMU:

Classes

- class [I2CBus](#)
Wrapper class for I2C-bus communication.
- class [IMU](#)
Virtual base class for [IMU](#).
- class [L3G](#)
Class to manage the communication to the [L3G](#) gyroscope via the I2C-bus.
- class [LSM303](#)
Class to manage communication to the [LSM303](#) compass via the I2C-bus.
- class [USU::MinImu](#)
Class to manage the communication to the Pololu MinIMU9.

6.2.1 Detailed Description

TODO: Write something here

6.3 Classes related to communication with MicroStrain 3DM-GX3

Collaboration diagram for Classes related to communication with MicroStrain 3DM-GX3:

Classes

- class [USU::GX3Packet](#)
Abstract base class for received packets.
- class [USU::RawAccAng](#)
Representation for receiving (raw) acceleration & angular rate packets.
- class [USU::AccAngMag](#)
Representation for receiving acceleration, angular rate and magnetometer packets.
- class [USU::Quaternion](#)
Representation for receiving the [Quaternion](#) representation from the [IMU](#).
- class [USU::AccAngMagOrientationMat](#)
Representation for packets containing the 3 sensor vectors and orientation matrix This class can be used with the commands which return 3 Vectors and a 3x3 Matrix. The units are:
- class [USU::GX3Command](#)
Base class for commands send to the 3DM-GX3-25.
- class [USU::SetContinuousMode](#)
Represents the "Set continuous mode" command.
- class [USU::SamplingSettings](#)
Represents the "Sampling Settings" command.
- class [USU::RtThread](#)
Abstract wrapper class for the pthread library with RT-priority.
- class [USU::SharedQueue< T >](#)
Wrapper class to make std::queue thread safe.

Typedefs

- typedef `std::shared_ptr < GX3Packet >` [USU::packet_ptr](#)
Represents the Thread class for communication with the 3DM-GX3-25.

6.3.1 Detailed Description

TODO: Write something here

6.3.2 Typedef Documentation

6.3.2.1 `typedef std::shared_ptr<GX3Packet> USU::packet_ptr`

Represents the Thread class for communication with the 3DM-GX3-25.

The class is derived from [RtThread](#). It initializes the serial interface to the 3DM and sets the sampling settings. Finally it starts the continuous mode and polls the serial port for new arrived data. New data is stored in a FIFO queue.

TODO: Use the parent class for the package instead to make it more generic.

3

Shared pointer for packages

In order to store any kind of a GX3Package in the queue a pointer must be used. Shared pointer is used to avoid memory leaks.

Definition at line 44 of file gx3communicator.h.

6.4 Classes related to controlling the motors

Collaboration diagram for Classes related to controlling the motors:

Classes

- class [Beagle_GPIO](#)
Wrapper class to access the GPIOs of the BeagleBone.
- class [cPWM](#)
Wrapper class to access the PWM-devices of the BeagleBone.
- class [I2CBus](#)
Wrapper class for I2C-bus communication.
- class [USU::Max127](#)
Class representing the MAX127 ADC.
- class [USU::Motor](#)
Class which represents a motor.
- class [USU::MotorControl](#)
Represents the class for motor control.

6.4.1 Detailed Description

TODO: Write something here

Chapter 7

Namespace Documentation

7.1 USU Namespace Reference

TODO: Make some proper exceptions.

Classes

- class [GX3Communicator](#)
- class [KalmanFilter](#)
Represents the Periodic Thread class for state estimation.
- class [Lock](#)
Wrapper class for pthread mutexes.
- class [ScopedLock](#)
Provides a helper class for Scoped Mutexes.
- class [Max127](#)
Class representing the MAX127 ADC.
- class [GX3Packet](#)
Abstract base class for received packets.
- class [RawAccAng](#)
Representation for receiving (raw) acceleration & angular rate packets.
- class [AccAngMag](#)
Representation for receiving acceleration, angular rate and magnetometer packets.
- class [Quaternion](#)
Representation for receiving the [Quaternion](#) representation from the [IMU](#).
- class [AccAngMagOrientationMat](#)
Representation for packets containing the 3 sensor vectors and orientation matrix This class can be used with the commands which return 3 Vectors and a 3x3 Matrix. The units are:
- class [GX3Command](#)
Base class for commands send to the 3DM-GX3-25.

- class [SetContinuousMode](#)
Represents the "Set continuous mode" command.
- class [SamplingSettings](#)
Represents the "Sampling Settings" command.
- class [MinImu](#)
Class to manage the communication to the Pololu MinIMU9.
- class [Motor](#)
Class which represents a motor.
- class [MotorControl](#)
Represents the class for motor control.
- class [PeriodicRtThread](#)
TODO: Make some proper exceptions.
- class [RtThread](#)
Abstract wrapper class for the pthread library with RT-priority.
- class [Semaphore](#)
Wrapper class for semaphores.
- class [SharedQueue](#)
Wrapper class to make std::queue thread safe.

Typedefs

- typedef std::shared_ptr < [GX3Packet](#) > [packet_ptr](#)
Represents the Thread class for communication with the 3DM-GX3-25.

Variables

- const uint8_t [I2C_ADDRESS](#) = 0b00101000
I2C-address of the ADC.
- const uint8_t [CONTROL_BYTE](#) = 0b10000110
Template of the control byte.
- const uint8_t [SEL0](#) = 4

7.1.1 Detailed Description

TODO: Make some proper exceptions.

7.1.2 Variable Documentation

7.1.2.1 const uint8_t USU::ACC_ANG = 0xC2

Acceleration & Angular Rate

Definition at line 30 of file messages.h.

7.1.2.2 const uint8_t USU::ACC_ANG_MAG_VEC = 0xCB

Acceleration, Angular Rate & Magnetometer Vector

Definition at line 39 of file messages.h.

7.1.2.3 const uint8_t USU::ACC_ANG_MAG_VEC_ORIENTATION_MAT = 0xCC

Acceleration, Angular Rate & Magnetometer Vectors & Orientation Matrix

Definition at line 40 of file messages.h.

7.1.2.4 `const uint8_t USU::ACC_ANG_ORIENTATION_MAT = 0xC8`

Acceleration, Angular Rate & Orientation Matrix

Definition at line 36 of file messages.h.

7.1.2.5 `const uint8_t USU::CAPTURE_GYRO_BIAS = 0xCD`

Capture Gyro Bias

Definition at line 41 of file messages.h.

7.1.2.6 `const uint8_t USU::COMM_SETTINGS = 0xD9`

Communications Settings

Definition at line 52 of file messages.h.

7.1.2.7 `const uint8_t USU::CONTINUOUS_PRESET = 0xD6`

Continuous Preset

Definition at line 50 of file messages.h.

7.1.2.8 `const uint8_t USU::CONTROL_BYTE = 0b10000110`

Template of the control byte.

The used settings are_

- fullscale range +-5V
- Standby Power-Down mode

The bits for channel selection are set to 0. Send CONTROL_BYTE | (CH<<SELO) with CH being the desired channel via the [I2C Bus](#).

Definition at line 40 of file max127.h.

7.1.2.9 `const uint8_t USU::DELTA_ANGLE_VEL = 0xC3`

DeltaAngle & DeltaVelocity

Definition at line 31 of file messages.h.

7.1.2.10 `const uint8_t USU::DELTA_ANGLE_VEL_MAG_VEC = 0xD3`

DeltaAngle & DeltaVelocity & Magnetometer Vectors

Definition at line 47 of file messages.h.

7.1.2.11 `const uint8_t USU::DEVICE_RESET = 0xFE`

Device Reset (no reply)

Definition at line 63 of file messages.h.

7.1.2.12 `const uint8_t USU::EULER_ANGLES = 0xCE`

Euler Angles

Definition at line 42 of file messages.h.

7.1.2.13 `const uint8_t USU::EULER_ANGLES_ANG_RATES = 0xCF`

Euler Angles and Angular Rates

Definition at line 43 of file messages.h.

7.1.2.14 `const uint8_t USU::FIRMWARE_UPDATE = 0xFD`

Firmware Update (no reply)

Definition at line 62 of file messages.h.

7.1.2.15 `const uint8_t USU::GYRO_STABIL_ACC_ANG_MAG = 0xD2`

Gyro Stabilized Acceleration, Angular Rate & Magnetometer

Definition at line 46 of file messages.h.

7.1.2.16 `const uint8_t USU::I2C_ADDRESS = 0b00101000`

I2C-address of the ADC.

It is assumed that the PINs A0-A2 are connected to GND. If the PINs are connected to VCC change accordingly.

Definition at line 27 of file max127.h.

7.1.2.17 `const uint8_t USU::MAG_VEC = 0xC7`

Magnetometer Vector

Definition at line 35 of file messages.h.

7.1.2.18 `const uint8_t USU::MODE = 0xD4`

Mode

Definition at line 48 of file messages.h.

7.1.2.19 `const uint8_t USU::MODE_PRESET = 0xD5`

Mode Preset

Definition at line 49 of file messages.h.

7.1.2.20 `const uint8_t USU::ORIENTATION_MATRIX = 0xC5`

Orientation Matrix

Definition at line 33 of file messages.h.

7.1.2.21 `const uint8_t USU::ORIENTATION_UPDATE_MAT = 0xC6`

Orientation Update Matrix

Definition at line 34 of file messages.h.

7.1.2.22 `const uint8_t USU::QUATERNION = 0xDF`

[Quaternion](#)

Definition at line 56 of file messages.h.

7.1.2.23 `const uint8_t USU::RAW_ACC_ANG = 0xC1`

Raw Accelerometer and Angular Rate Sensor Outputs

Definition at line 29 of file messages.h.

7.1.2.24 `const uint8_t USU::READ_DEVICE_ID = 0xEA`

Read Device ID String

Definition at line 60 of file messages.h.

7.1.2.25 `const uint8_t USU::READ_FIRMWARE_VER = 0xE9`

Read Firmware Version Number

Definition at line 59 of file messages.h.

7.1.2.26 `const uint8_t USU::READ_WORD_EEPROM = 0xE5`

Read Word from EEPROM

Definition at line 58 of file messages.h.

7.1.2.27 `const uint8_t USU::REALIGN_UP_NORTH = 0xDD`

Realign Up and North

Definition at line 55 of file messages.h.

7.1.2.28 `const uint8_t USU::SAMPLING_SETTINGS = 0xDB`

Sampling Settings

Definition at line 54 of file messages.h.

7.1.2.29 `const uint8_t USU::SELO = 4`

Bit offset for channel selection

Definition at line 41 of file max127.h.

7.1.2.30 `const uint8_t USU::SET_CONTINUOUS_MODE = 0xC4`

Set Continuous Mode

Definition at line 32 of file messages.h.

7.1.2.31 `const uint8_t USU::STATIONARY_TEST = 0xDA`

Stationary Test

Definition at line 53 of file messages.h.

7.1.2.32 `const uint8_t USU::STOP_CONTINUOUS = 0xFA`

Stop Continuous Mode (no reply)

Definition at line 61 of file messages.h.

7.1.2.33 `const uint8_t USU::TEMPERATURES = 0xD1`

Temperatures

Definition at line 45 of file messages.h.

7.1.2.34 `const uint8_t USU::TIMER = 0xD7`

Timer

Definition at line 51 of file messages.h.

7.1.2.35 `const uint8_t USU::TRANSFER_TO_NONVOL_MEM = 0xD0`

Transfer Quantity to Non-Volatile Memory

Definition at line 44 of file messages.h.

7.1.2.36 `const uint8_t USU::WRITE_ACC_BIAS_CORRECTION = 0xC9`

Write Accel Bias Correction

Definition at line 37 of file messages.h.

7.1.2.37 `const uint8_t USU::WRITE_GYRO_BIAS_CORRECTION = 0xCA`

Write Gyro Bias Correction

Definition at line 38 of file messages.h.

7.1.2.38 `const uint8_t USU::WRITE_WORD_EEPROM = 0xE4`

Write Word to EEPROM

Definition at line 57 of file messages.h.

Chapter 8

Class Documentation

8.1 USU::AccAngMag Class Reference

Representation for receiving acceleration, angular rate and magnetometer packets.

```
#include <messages.h>
```

Inheritance diagram for USU::AccAngMag:

Collaboration diagram for USU::AccAngMag:

Public Types

- enum { [size](#) = 43 }

Public Member Functions

- [AccAngMag](#) ()
Creates an empty packet object.
- bool [readFromSerial](#) (SerialPort &serialPort)
Read the information for the structure from the SerialPort.
- virtual void [print](#) (std::ostream &os) const
Print the stored information to ostream object.

Public Attributes

- [vector](#) [acc](#)
- [vector](#) [gyro](#)
- [vector](#) [mag](#)
- unsigned int [timer](#)

8.1.1 Detailed Description

Representation for receiving acceleration, angular rate and magnetometer packets.

This class can be used with the commands which return 3 Vectors. The units are:

- acceleration: g
- angular rate: rad/s

- magnetic field: gauß

Definition at line 251 of file messages.h.

8.1.2 Member Enumeration Documentation

8.1.2.1 anonymous enum

Enumerator:

size

Definition at line 310 of file messages.h.

8.1.3 Constructor & Destructor Documentation

8.1.3.1 USU::AccAngMag::AccAngMag () `[inline]`

Creates an empty packet object.

Definition at line 257 of file messages.h.

8.1.4 Member Function Documentation

8.1.4.1 virtual void USU::AccAngMag::print (std::ostream & *os*) const `[inline, virtual]`

Print the stored information to ostream object.

Format: timestamp,accX,accY,accZ,magX,magY,magZ,gyroX,gyroY,gyroZ

Parameters

<i>os</i>	
-----------	--

Implements [USU::GX3Packet](#).

Definition at line 297 of file messages.h.

8.1.4.2 bool USU::AccAngMag::readFromSerial (SerialPort & *serialPort*) `[inline, virtual]`

Read the information for the structure from the SerialPort.

Parameters

<i>serialPort</i>	serialPort object from libserial
-------------------	----------------------------------

Returns

bool true if reading (and checksum) was successful, false otherwise

Implements [USU::GX3Packet](#).

Definition at line 259 of file messages.h.

8.1.5 Member Data Documentation

8.1.5.1 vector **USU::AccAngMag::acc**

Vector containing the accelerometer data

Definition at line 304 of file messages.h.

8.1.5.2 vector **USU::AccAngMag::gyro**

Vector containing the gyroscope (angular rate) data

Definition at line 305 of file messages.h.

8.1.5.3 vector **USU::AccAngMag::mag**

Vector containing the magnetometer data

Definition at line 306 of file messages.h.

8.1.5.4 unsigned int **USU::AccAngMag::timer**

The value of the timestamp for the package

Definition at line 308 of file messages.h.

The documentation for this class was generated from the following file:

- include/[messages.h](#)

8.2 USU::AccAngMagOrientationMat Class Reference

Representation for packets containing the 3 sensor vectors and orientation matrix This class can be used with the commands which return 3 Vectors and a 3x3 Matrix. The units are:

```
#include <messages.h>
```

Inheritance diagram for USU::AccAngMagOrientationMat:

Collaboration diagram for USU::AccAngMagOrientationMat:

Public Types

- enum { [size](#) = 79 }

Public Member Functions

- [AccAngMagOrientationMat](#) ()
Creates an empty packet object.
- bool [readFromSerial](#) (SerialPort &serialPort)
Read the information for the structure from the SerialPort.
- virtual void [print](#) (std::ostream &os) const
Print the stored information to ostream object.

Public Attributes

- [vector acc](#)
- [vector gyro](#)
- [vector mag](#)
- [matrix orientation](#)
- unsigned int [timer](#)

8.2.1 Detailed Description

Representation for packets containing the 3 sensor vectors and orientation matrix This class can be used with the commands which return 3 Vectors and a 3x3 Matrix. The units are:

- acceleration: g
- angular rate: rad/s
- magnetic field: gauß

Definition at line 378 of file messages.h.

8.2.2 Member Enumeration Documentation

8.2.2.1 anonymous enum

Enumerator:

size

Definition at line 432 of file messages.h.

8.2.3 Constructor & Destructor Documentation

8.2.3.1 `USU::AccAngMagOrientationMat::AccAngMagOrientationMat ()` `[inline]`

Creates an empty packet object.

Definition at line 384 of file messages.h.

8.2.4 Member Function Documentation

8.2.4.1 `virtual void USU::AccAngMagOrientationMat::print (std::ostream & os) const` `[inline, virtual]`

Print the stored information to ostream object.

Format: timestamp,accX,accY,accZ,magX,magY,magZ,gyroX,gyroY,gyroZ,mat(0,[0..2]),mat(1,[0..2]),mat(2,[0..2])

Parameters

<i>os</i>	
-----------	--

Implements [USU::GX3Packet](#).

Definition at line 414 of file messages.h.

8.2.4.2 bool USU::AccAngMagOrientationMat::readFromSerial (SerialPort & *serialPort*) [inline, virtual]

Read the information for the structure from the SerialPort.

Parameters

<i>serialPort</i>	serialPort object from libserial
-------------------	----------------------------------

Returns

bool true if reading (and checksum) was successful, false otherwise

Implements [USU::GX3Packet](#).

Definition at line 386 of file messages.h.

8.2.5 Member Data Documentation

8.2.5.1 vector USU::AccAngMagOrientationMat::acc

Vector containing the accelerometer data

Definition at line 425 of file messages.h.

8.2.5.2 vector USU::AccAngMagOrientationMat::gyro

Vector containing the gyroscope (angular rate) data

Definition at line 426 of file messages.h.

8.2.5.3 vector USU::AccAngMagOrientationMat::mag

Vector containing the magnetometer data

Definition at line 427 of file messages.h.

8.2.5.4 matrix USU::AccAngMagOrientationMat::orientation

3x3 Matrix containing the orientation

Definition at line 429 of file messages.h.

8.2.5.5 unsigned int USU::AccAngMagOrientationMat::timer

The value of the timestamp for the package

Definition at line 430 of file messages.h.

The documentation for this class was generated from the following file:

- include/messages.h

8.3 Beagle_GPIO Class Reference

Wrapper class to access the GPIOs of the BeagleBone.

```
#include <Beagle_GPIO.h>
```

Public Types

- enum [Beagle_GPIO_Status](#) { [kFail](#) = 0, [kSuccess](#) = 1 }
- enum { [kREVISION](#) = 0x0, [kSYSCONFIG](#) = 0x10, [kIRQSTATUS_RAW_0](#) = 0x24, [kIRQSTATUS_RAW_1](#) = 0x28, [kIRQSTATUS_0](#) = 0x2C, [kIRQSTATUS_1](#) = 0x30, [kIRQSTATUS_SET_0](#) = 0x34, [kIRQSTATUS_SET_1](#) = 0x38, [kIRQSTATUS_CLR_0](#) = 0x3C, [kIRQSTATUS_CLR_1](#) = 0x40, [kIRQWAKEN_0](#) = 0x44, [kIRQWAKEN_1](#) = 0x48, [kSYSSTATUS](#) = 0x114, [kCTRL](#) = 0x130, [kOE](#) = 0x134, [kDATAIN](#) = 0x138, [kDATAOUT](#) = 0x13C, [kLEVELDETECT0](#) = 0x140, [kLEVELDETECT1](#) = 0x144, [kRISINGDETECT](#) = 0x148, [kFALLINGDETECT](#) = 0x14C, [kDEBOUNCEENABLE](#) = 0x150, [kDEBOUNCINGTIME](#) = 0x154, [kCLEARDATAOUT](#) = 0x190, [kSETDATAOUT](#) = 0x194 }

8.4 `MotorProgrammer::Command Struct` Reference

Struct representing a single command point.

```
#include <motorprogrammer.hpp>
```

Public Attributes

- unsigned int `time`
- unsigned int `motor`
- int `speed`

8.4.1 Detailed Description

Struct representing a single command point.

At the point time the corresponding motor will be set to the desired speed

Definition at line 47 of file motorprogrammer.hpp.

8.4.2 Member Data Documentation

8.4.2.1 unsigned int **MotorProgrammer::Command::motor**

The motor ought to be set [0,3]

Definition at line 50 of file motorprogrammer.hpp.

8.4.2.2 int **MotorProgrammer::Command::speed**

The speed the motor will be set to at time

Definition at line 51 of file motorprogrammer.hpp.

8.4.2.3 unsigned int **MotorProgrammer::Command::time**

Time (in ms) from start

Definition at line 49 of file motorprogrammer.hpp.

The documentation for this struct was generated from the following file:

- examples/[motorprogrammer.hpp](#)

8.5 cPWM Class Reference

Wrapper class to access the PWM-devices of the BeagleBone.

```
#include <cPWM.h>
```

Public Types

- enum **Polarity** { [ActiveHigh](#), [ActiveLow](#) }

Public Member Functions

- [cPWM](#) (int id)
Simple C++ class wrapper for beaglebone PWM eHRPWM interface.
- virtual [~cPWM](#) ()

- void [DutyA_ns](#) (unsigned int nanoseconds)
- void [DutyA_percent](#) (unsigned int percent)
- void [DutyB_ns](#) (unsigned int nanoseconds)
- void [DutyB_percent](#) (unsigned int percent)
- void [Period_ns](#) (unsigned int nanoseconds)
- void [Period_freq](#) (unsigned int freq_Hz)
- void [PolarityA](#) ([cPWM::Polarity](#) polarity)
- void [RunA](#) ()
- void [StopA](#) ()
- void [PolarityB](#) ([cPWM::Polarity](#) polarity)
- void [RunB](#) ()
- void [StopB](#) ()

8.5.1 Detailed Description

Wrapper class to access the PWM-devices of the BeagleBone.

Definition at line 24 of file [cPWM.h](#).

8.5.2 Member Enumeration Documentation

8.5.2.1 enum [cPWM::Polarity](#)

Enumerator:

ActiveHigh

ActiveLow

Definition at line 27 of file [cPWM.h](#).

8.5.3 Constructor & Destructor Documentation

8.5.3.1 [cPWM::cPWM](#) (int *id*)

Simple C++ class wrapper for beaglebone PWM eHRPWM interface.

This class wraps the PWMss of the beaglebone, but it accesses the PWMss by means of the sysfs interface, so probably other systems are supported as well. The sysfs filenames are defined in [cPWM.h](#). The constructor just opens the sysfs files but doesn't write anything, so in order to properly use the PWMss you need to follow all the steps (frequency, period, polarity) before calling run.

Parameters

<i>in</i>	<i>id</i>	id of the PWMss to be initializaed. There are 3 of them, eHRPWM0 thru 2.
-----------	-----------	--

Returns

a [cPWM](#) object

TODO: Add clock selection (mmap). By now you must use setPWMReg.py method
 FIXME: pin mux settings should be done here? or at a higher level?

Definition at line 33 of file cPWM.cpp.

8.5.3.2 [cPWM::~cPWM](#)() [virtual]

[cPWM](#) Destructor, stops the PWMss

Definition at line 261 of file cPWM.cpp.

8.5.4 Member Function Documentation

8.5.4.1 void [cPWM::DutyA_ns](#) (unsigned int *nanoseconds*)

Set the duty cycle for A channel of the PWMss

Parameters

in	<i>nanoseconds</i> , :	duty cycle time in nanoseconds for A channel
----	---------------------------	--

Definition at line 98 of file cPWM.cpp.

8.5.4.2 void [cPWM::DutyA_percent](#) (unsigned int *percent*)

Set the duty cycle for A channel of the PWMss

Parameters

in	<i>percent</i> ,:	duty cycle time in percent for A channel
----	-------------------	--

Definition at line 113 of file cPWM.cpp.

8.5.4.3 void [cPWM::DutyB_ns](#) (unsigned int *nanoseconds*)

Set the duty cycle for B channel of the PWMss

Parameters

in	<i>nanoseconds</i> , :	duty cycle time in nanoseconds for B channel
----	---------------------------	--

Definition at line 127 of file cPWM.cpp.

8.5.4.4 void cPWM::DutyB_percent (unsigned int *percent*)

Set the duty cycle for B channel of the PWMss

Parameters

in	<i>percent</i> ,:	duty cycle time in percent for B channel
----	-------------------	--

Definition at line 143 of file cPWM.cpp.

8.5.4.5 void cPWM::Period_freq (unsigned int *freq_Hz*)

Set the period for the PWMss

Parameters

in	<i>freq_Hz</i> ,:	PWM frequency in Hz
----	-------------------	---------------------

Definition at line 171 of file cPWM.cpp.

8.5.4.6 void cPWM::Period_ns (unsigned int *nanoseconds*)

Set the period for the PWMss

Parameters

in	<i>nanoseconds</i> ,:	period time in nanoseconds
----	-----------------------	----------------------------

Definition at line 158 of file cPWM.cpp.

8.5.4.7 void cPWM::PolarityA (cPWM::Polarity *polarity*)

Set the polarity for the A channel of the PWMss

Parameters

in	<i>polarity</i>	polarity
----	-----------------	----------

Definition at line 184 of file cPWM.cpp.

8.5.4.8 void cPWM::PolarityB (cPWM::Polarity *polarity*)

Set the polarity for the B channel of the PWMss

Parameters

in	<i>polarity</i>	polarity
----	-----------------	----------

Definition at line 224 of file cPWM.cpp.

8.5.4.9 void cPWM::RunA ()

Set the A channel to run status

Definition at line 201 of file cPWM.cpp.

8.5.4.10 void cPWM::RunB ()

Set the B channel to run

Definition at line 241 of file cPWM.cpp.

8.5.4.11 void cPWM::StopA ()

Stop the A channel

Definition at line 212 of file cPWM.cpp.

8.5.4.12 void cPWM::StopB ()

Stop the B channel

Definition at line 251 of file cPWM.cpp.

The documentation for this class was generated from the following files:

- [include/cPWM.h](#)
- [src/cPWM.cpp](#)

8.6 DataCollector Class Reference

Simple class which manages the motors and collects data at an periodic interval.

```
#include <datacollector.hpp>
```

Inheritance diagram for DataCollector:

Collaboration diagram for DataCollector:

Public Member Functions

- [DataCollector](#) (int priority, unsigned int period_us, const char *filename, [MotorControl](#) &motors)

Constructor.

- virtual void [run](#) ()

Runs the sampling loop.

- [DataCollector](#) (int priority, int period_us, const char *i2cdevice)
- int [timeval_subtract](#) (struct timeval *result, struct timeval *x, struct timeval *y)
- virtual void [run](#) ()

Actual method of the thread is running.

- void [stop](#) ()

Public Attributes

- volatile bool [mKeepRunning](#)

8.6.1 Detailed Description

Simple class which manages the motors and collects data at an periodic intervall.

Inherited from [PeriodicRtThread](#)

Definition at line 16 of file [datacollector.hpp](#).

8.6.2 Constructor & Destructor Documentation

8.6.2.1 [DataCollector::DataCollector](#) (int *priority*, unsigned int *period_us*, const char * *filename*, [MotorControl](#) & *motors*)

Constructor.

Sets up the underlying [PeriodicRtThread](#).

Parameters

<i>priority</i>	Priority of the PeriodicRtThread
<i>period_us</i>	sampling period (in us) of the PeriodicRtThread
<i>filename</i>	Filename of the output file
<i>motors</i>	Reference to the MotorControl object for accessing the ADC

8.6.2.2 [DataCollector::DataCollector](#) (int *priority*, int *period_us*, const char * *i2cdevice*) [inline]

Definition at line 16 of file [minimu-example.cpp](#).

8.6.3 Member Function Documentation

8.6.3.1 void DataCollector::run () [virtual]

Runs the sampling loop.

Reads the channels and set speeds of all 4 motors and prints the results to the output file.

Implements [USU::PeriodicRtThread](#).

Definition at line 75 of file datacollector.hpp.

8.6.3.2 virtual void DataCollector::run () [inline, virtual]

Actual method of the thread is running.

Every child class has to implement this function in order to do some threaded work.

Implements [USU::PeriodicRtThread](#).

Definition at line 43 of file minimu-example.cpp.

8.6.3.3 void DataCollector::stop () [inline]

Definition at line 69 of file minimu-example.cpp.

8.6.3.4 int DataCollector::timeval_subtract (struct timeval * result, struct timeval * x, struct timeval * y) [inline]

Definition at line 19 of file minimu-example.cpp.

8.6.4 Member Data Documentation

8.6.4.1 volatile bool DataCollector::mKeepRunning

Possibility to interrupt thread

Definition at line 41 of file datacollector.hpp.

The documentation for this class was generated from the following files:

- examples/[datacollector.hpp](#)
- examples/[minimu-example.cpp](#)

8.7 USU::GX3Command Class Reference

Base class for commands send to the 3DM-GX3-25.

```
#include <messages.h>
```

Inheritance diagram for USU::GX3Command:

Public Member Functions

- virtual bool [sendCommand](#) (SerialPort &serialPort)=0
- virtual bool [checkResponse](#) (uint8_t *buffer)=0

8.7.1 Detailed Description

Base class for commands send to the 3DM-GX3-25.

Just an empty base class, so that all commands share the same base class.

TODO: Implement sendCommand in base class instead of in each class separately?

Definition at line 444 of file messages.h.

8.7.2 Member Function Documentation

8.7.2.1 virtual bool **USU::GX3Command::checkResponse** (uint8_t * *buffer*) [pure virtual]

Implemented in [USU::SamplingSettings](#), and [USU::SetCountinuousMode](#).

8.7.2.2 virtual bool **USU::GX3Command::sendCommand** (SerialPort & *serialPort*) [pure virtual]

Implemented in [USU::SamplingSettings](#), and [USU::SetCountinuousMode](#).

The documentation for this class was generated from the following file:

- include/[messages.h](#)

8.8 USU::GX3Communicator Class Reference

```
#include <gx3communicator.h>
```

Inheritance diagram for USU::GX3Communicator:

Collaboration diagram for USU::GX3Communicator:

Public Member Functions

- [GX3Communicator](#) (int priority, const char *serialDevice, SerialPort::BaudRate baudRate=SerialPort::BAUD_115200)
Constructor of the class.
- void [initialize](#) ()
Initialize the SerialPort and the MicroStrain IMU.
- virtual void [run](#) ()
Thread routine.

- void [stop](#) ()
Signals the thread to stop.
- void [pop](#) ()
Delete the first element of the FIFO.
- bool [isEmpty](#) ()
Check if the FIFO is empty.
- unsigned [size](#) ()
Return the number of elements in the FIFO.
- [packet_ptr](#) & [front](#) ()
Return the first element from the FIFO.

8.8.1 Detailed Description

Definition at line 46 of file gx3communicator.h.

8.8.2 Constructor & Destructor Documentation

8.8.2.1 GX3Communicator::GX3Communicator (int *priority*, const char * *serialDevice*, SerialPort::BaudRate *baudRate* = SerialPort::BAUD_115200)

Constructor of the class.

Sets up the serial port and thread attributes.

Parameters

<i>priority</i>	Priority of the pthread (1..99)
<i>serialDevice</i>	Name of the serial device
<i>baudRate</i>	Baud rate for the serial device (if different from 115200)

Definition at line 47 of file gx3communicator.cpp.

8.8.3 Member Function Documentation

8.8.3.1 [packet_ptr](#) & USU::GX3Communicator::front () `[inline]`

Return the first element from the FIFO.

TODO: Make a blocking version of it

Returns

[AccAngMag](#) the first element

Definition at line 111 of file gx3communicator.h.

8.8.3.2 void GX3Communicator::initialize ()

Initialize the SerialPort and the MicroStrain [IMU](#).

Definition at line 53 of file gx3communicator.cpp.

8.8.3.3 bool USU::GX3Communicator::isEmpty () [inline]

Check if the FIFO is empty.

Returns

bool true, if empty

Definition at line 95 of file gx3communicator.h.

8.8.3.4 void USU::GX3Communicator::pop () [inline]

Delete the first element of the FIFO.

Definition at line 87 of file gx3communicator.h.

8.8.3.5 void GX3Communicator::run () [virtual]

Thread routine.

- Set sampling settings of 3DM
- Start continuous mode
- Poll serial port for newly arrived packages
- Convert binary data
- TODO: Send new package to [KalmanFilter](#)

TODO: Error

TODO: Error?

Implements [USU::RtThread](#).

Definition at line 73 of file gx3communicator.cpp.

8.8.3.6 unsigned USU::GX3Communicator::size () [inline]

Return the number of elements in the FIFO.

Returns

unsigned number of elements

Definition at line 102 of file gx3communicator.h.

8.8.3.7 void USU::GX3Communicator::stop () [inline]

Signals the thread to stop.

Definition at line 82 of file gx3communicator.h.

The documentation for this class was generated from the following files:

- include/gx3communicator.h
- src/gx3communicator.cpp

8.9 USU::GX3Packet Class Reference

Abstract base class for received packets.

```
#include <messages.h>
```

Inheritance diagram for USU::GX3Packet:

Public Member Functions

- virtual bool [readFromSerial](#) (SerialPort &serialPort)=0
Read the information for the structure from the SerialPort.
- virtual void [print](#) (std::ostream &os) const =0
Print the information of the [GX3Packet](#) to an ostream object.

Static Public Member Functions

- static bool [calculateChecksum](#) (uint8_t *buffer, unsigned int length)
Calculates the checksum of a received byte array.

Static Protected Member Functions

- static [vector](#) [createVector](#) (uint8_t *buffer)
Creates a [Eigen::Vector3f](#) consisting of 3 floats from 12 successive bytes.
- static unsigned int [createUInt](#) (uint8_t *buffer)

Creates an unsigned integer from 4 successive bytes.

- static void [createMatrix](#) (uint8_t *buffer, [matrix](#) &mat)

Creates a Eigen::Matrix3f from byte array.

8.9.1 Detailed Description

Abstract base class for received packets.

The class provides some useful function available to all derived classes such as checksum calculation and creation of vectors and matrices from the received binary data.

Definition at line 79 of file messages.h.

8.9.2 Member Function Documentation

8.9.2.1 static bool [USU::GX3Packet::calculateChecksum](#) (uint8_t * *buffer*, unsigned int *length*) [inline, static]

Calculates the checksum of a received byte array.

Parameters

<i>buffer</i>	pointer to the byte array
<i>length</i>	length of the byte array

Returns

bool true: checksum matches, false: checksum does not match

Definition at line 107 of file messages.h.

8.9.2.2 static void [USU::GX3Packet::createMatrix](#) (uint8_t * *buffer*, [matrix](#) & *mat*) [inline, static, protected]

Creates a Eigen::Matrix3f from byte array.

NOTE: Make sure that the endianness of the host system and the 3DM match. The endianness of the sent floats can be set with the [SamplingSettings](#) command.

Parameters

<i>buffer</i>	Pointer to the byte array
<i>mat</i>	reference to a matrix which will be filled with the data from the byte array

Definition at line 155 of file messages.h.

8.9.2.3 `static unsigned int USU::GX3Packet::createUInt (uint8_t * buffer)` `[inline, static, protected]`

Creates an unsigned integer from 4 successive bytes.

Parameters

<i>buffer</i>	Pointer to the byte array
---------------	---------------------------

Returns

unsigned int created unsigned integer

Definition at line 141 of file messages.h.

8.9.2.4 `static vector USU::GX3Packet::createVector (uint8_t * buffer)` `[inline, static, protected]`

Creates a Eigen::Vector3f consisting of 3 floats from 12 successive bytes.

NOTE: Make sure that the endianness of the host system and the 3DM match. The endianness of the sent floats can be set with the [SamplingSettings](#) command.

Parameters

<i>buffer</i>	Pointer to the byte array
---------------	---------------------------

Returns

vector vector created from the byte array

Definition at line 128 of file messages.h.

8.9.2.5 `virtual void USU::GX3Packet::print (std::ostream & os) const` `[pure virtual]`

Print the information of the [GX3Packet](#) to an ostream object.

Enables convenient data recording of all different [GX3Packet](#) classes. Uses csv format; every packet is a single line (without std::endl).

Parameters

<i>os</i>	
-----------	--

Implemented in [USU::AccAngMagOrientationMat](#), [USU::Quaternion](#), [USU::AccAngMag](#), and [USU::RawAccAng](#).

8.9.2.6 virtual bool USU::GX3Packet::readFromSerial (SerialPort & serialPort) [pure virtual]

Read the information for the structure from the SerialPort.

Parameters

<i>serialPort</i>	serialPort object from libserial
-------------------	----------------------------------

Returns

bool true if reading (and checksum) was successful, false otherwise

Implemented in [USU::AccAngMagOrientationMat](#), [USU::Quaternion](#), [USU::AccAng-Mag](#), and [USU::RawAccAng](#).

The documentation for this class was generated from the following file:

- [include/messages.h](#)

8.10 I2CBus Class Reference

Wrapper class for I2C-bus communication.

```
#include <I2CBus.h>
```

Public Member Functions

- [I2CBus](#) (const char *deviceName)
Constructor.
- [~I2CBus](#) ()
Destructor.
- void [addressSet](#) (uint8_t address)
Set the address of the I2C device the bus will read and write data to.
- void [writeByte](#) (uint8_t command, uint8_t data)
Write a byte to the register command.
- void [writeByte](#) (uint8_t data)
Write a byte without a specifying a register.
- uint8_t [readByte](#) (uint8_t command)
Read a byte from the register command.
- uint8_t [readByte](#) ()
Read a byte directly without specifying a register.
- uint16_t [readWord](#) (uint8_t command)
Read a word (2 bytes) from the register command.
- uint16_t [readWord](#) ()

Read a word (2 bytes) directly without specifying a register.

- int [tryReadByte](#) (uint8_t command)

Tries to read a byte from register command.

- void [readBlock](#) (uint8_t command, uint8_t size, uint8_t *data)

Read a block of data from the device starting at register command.

8.10.1 Detailed Description

Wrapper class for I2C-bus communication.

Definition at line 16 of file I2C Bus.h.

8.10.2 Constructor & Destructor Documentation

8.10.2.1 I2C Bus::I2C Bus (const char * deviceName)

Constructor.

Sets up the interface to the I2C-bus deviceName

Parameters

<i>deviceName</i>	Name of the I2C-bus device
-------------------	----------------------------

Definition at line 8 of file I2C Bus.cpp.

8.10.2.2 I2C Bus::~I2C Bus ()

Destructor.

Definition at line 17 of file I2C Bus.cpp.

8.10.3 Member Function Documentation

8.10.3.1 void I2C Bus::addressSet (uint8_t address)

Set the address of the I2C device the bus will read and write data to.

Parameters

<i>address</i>	7-bit address (trailing 0)
----------------	----------------------------

Definition at line 22 of file I2C Bus.cpp.

8.10.3.2 void I2C Bus::readBlock (uint8_t command, uint8_t size, uint8_t * data)

Read a block of data from the device starting at register command.

Parameters

<i>command</i>	Register to start reading from
<i>size</i>	Number of bytes to read
<i>data</i>	Allocated buffer with length of at least size

Definition at line 98 of file I2CBus.cpp.

8.10.3.3 `uint8_t I2CBus::readByte (uint8_t command)`

Read a byte from the register command.

Parameters

<i>command</i>	Register to read from
----------------	-----------------------

Returns

`uint8_t` Value of the register command

Definition at line 49 of file I2CBus.cpp.

8.10.3.4 `uint8_t I2CBus::readByte ()`

Read a byte directly without specifying a register.

Read a byte directly from the device set with [addressSet\(\)](#) without specifying a register.

Returns

`uint8_t` Value of the read data byte

Definition at line 61 of file I2CBus.cpp.

8.10.3.5 `uint16_t I2CBus::readWord (uint8_t command)`

Read a word (2 bytes) from the register command.

Parameters

<i>command</i>	Register to read the word from
----------------	--------------------------------

Returns

`uint16_t` Value of the register command

Definition at line 71 of file I2CBus.cpp.

8.10.3.6 uint16_t I2C Bus::readWord ()

Read a word (2 bytes) directly without specifying a register.

Read a word (2 bytes) directly from the device set with [addressSet\(\)](#) without specifying a register

Returns

uint16_t Value of the read data word

Definition at line 81 of file I2C Bus.cpp.

8.10.3.7 int I2C Bus::tryReadByte (uint8_t command)

Tries to read a byte from register command.

Difference to [readByte\(uint8_t\)](#) is, that this function won't check if the reading was successful. Returns the value of the register if successful and -1 if the read failed.

Parameters

<i>command</i>	
----------------	--

Returns

int

Definition at line 92 of file I2C Bus.cpp.

8.10.3.8 void I2C Bus::writeByte (uint8_t command, uint8_t data)

Write a byte to the register command.

Parameters

<i>command</i>	Register to write the byte to
<i>data</i>	Byte of data to write to the device set with addressSet()

Definition at line 31 of file I2C Bus.cpp.

8.10.3.9 void I2C Bus::writeByte (uint8_t data)

Write a byte without a specifying a register.

Parameters

<i>data</i>	Byte of data which will be written directly to the device set with addressSet()
-------------	---

Definition at line 40 of file I2CBus.cpp.

The documentation for this class was generated from the following files:

- [include/I2CBus.h](#)

8.12 USU::KalmanFilter Class Reference

Represents the Periodic Thread class for state estimation.

```
#include <kalmanfilter.h>
```

Inheritance diagram for USU::KalmanFilter:

Collaboration diagram for USU::KalmanFilter:

Classes

- struct **Command**
Struct representing a single command point.

Public Types

- enum **Mode** { SimpleControl, CollectPololuData, CollectMicroStrainData, CollectData }

Public Member Functions

- **KalmanFilter** (int priority, unsigned int period_us, const char *i2clmu, const char *i2cMotor)
Constructor of the class.
- virtual void **run** ()
Thread routine.
- void **stop** ()
Signals the thread to stop.
- bool **getState** ()
Returns the current system state estimate.
- void **initializeModeSimpleControl** (std::string trajFilename, float pgain)
- **Mode** **getMode** () const
- void **setMode** (const **Mode** &value)

8.12.1 Detailed Description

Represents the Periodic Thread class for state estimation.

This class is derived from [PeriodicRtThread](#). It initializes the interface to the MinIMU9v2 and estimates the system state using Kalman filtering techniques. The state estimate can be accessed from other threads (protected by mutex).

TODO:

- Implement kalman filter for state estimate
- change name to something more meaningful?

Definition at line 38 of file kalmanfilter.h.

8.12.2 Member Enumeration Documentation

8.12.2.1 enum `USU::KalmanFilter::Mode`

Enumerator:

SimpleControl
CollectPololuData
CollectMicroStrainData
CollectData

Definition at line 41 of file kalmanfilter.h.

8.12.3 Constructor & Destructor Documentation

8.12.3.1 `KalmanFilter::KalmanFilter (int priority, unsigned int period_us, const char * i2clmu, const char * i2cMotor)`

Constructor of the class.

Initializes the interface to the MinIMU9 sensors and to the 3DM-GX3. Sets up the motor controller.

Parameters

<i>priority</i>	priority of the underlying periodic thread
<i>period_us</i>	period (in us) of the underlying periodic thread
<i>i2clmu</i>	name of the I2C-device for the IMU (e.g. /dev/i2c-1)
<i>i2cMotor</i>	name of the I2C-device for the Motors (e.g. /dev/i2c-2)

Definition at line 49 of file kalmanfilter.cpp.

8.12.4 Member Function Documentation

8.12.4.1 `KalmanFilter::Mode KalmanFilter::getMode () const`

Definition at line 295 of file kalmanfilter.cpp.

8.12.4.2 `bool KalmanFilter::getState ()`

Returns the current system state estimate.

Copies the current system state estimate. Acquires mutex before accessing the internal variable to avoid read/write-conflicts.

Returns

bool Current system state TODO: Currently only dummy variable. Replace with actual state representation (quaternion?) Probably not necessary anymore

Definition at line 72 of file kalmanfilter.cpp.

8.12.4.3 `void KalmanFilter::initializeModeSimpleControl (std::string trajFilename, float pgain)`

Definition at line 78 of file kalmanfilter.cpp.

8.12.4.4 `void KalmanFilter::run () [virtual]`

Thread routine.

Current scenario is:

- Get quaternion data from MicroStrain at constant rate
- Hand this state estimate to the motor controller.

TODO: Develop scenario using Kalman-Filter

Implements [USU::PeriodicRtThread](#).

Definition at line 55 of file kalmanfilter.cpp.

8.12.4.5 `void KalmanFilter::setMode (const Mode & value)`

Definition at line 300 of file kalmanfilter.cpp.

8.12.4.6 `void USU::KalmanFilter::stop () [inline]`

Signals the thread to stop.

Definition at line 78 of file kalmanfilter.h.

The documentation for this class was generated from the following files:

- include/[kalmanfilter.h](#)
- src/[kalmanfilter.cpp](#)

8.13 L3G Class Reference

Class to manage the communication to the [L3G](#) gyroscope via the I2C-bus.

```
#include <L3G.h>
```

Public Member Functions

- [L3G](#) (const char *i2cDeviceName)
- void [enable](#) (void)
Puts the chip into active sampling mode.
- void [writeReg](#) (uint8_t reg, uint8_t value)
Write value to register reg.
- uint8_t [readReg](#) (uint8_t reg)
Read the value from register reg.
- void [read](#) ()
Reads the current raw angular rates into [g](#).

Public Attributes

- int [g](#) [3]

8.13.1 Detailed Description

Class to manage the communication to the [L3G](#) gyroscope via the I2C-bus.

Definition at line 44 of file L3G.h.

8.13.2 Constructor & Destructor Documentation

8.13.2.1 L3G::L3G (const char * i2cDeviceName)

Parameters

<i>i2cDevice- Name</i>	
----------------------------	--

Definition at line 9 of file L3G.cpp.

8.13.3 Member Function Documentation

8.13.3.1 void L3G::enable (void)

Puts the chip into active sampling mode.

Definition at line 28 of file L3G.cpp.

8.13.3.2 void L3G::read ()

Reads the current raw angular rates into [g](#).

Definition at line 46 of file L3G.cpp.

8.13.3.3 uint8_t L3G::readReg (uint8_t reg)

Read the value from register reg.

Parameters

<i>reg</i>	Register address to read from
------------	-------------------------------

Returns

uint8_t Value read from the register reg

Definition at line 41 of file L3G.cpp.

8.13.3.4 void L3G::writeReg (uint8_t reg, uint8_t value)

Write value to register reg.

TODO: Make registers enum, so that writing to wrong register impossible?

Parameters

<i>reg</i>	Register address to write to
<i>value</i>	Value to write to the register reg

Definition at line 36 of file L3G.cpp.

8.13.4 Member Data Documentation

8.13.4.1 int L3G::g[3]

Gyro raw angular velocity readings

Definition at line 54 of file L3G.h.

The documentation for this class was generated from the following files:

- [include/L3G.h](#)
- [src/L3G.cpp](#)

8.14 USU::Lock Class Reference

Wrapper class for pthread mutexes.

```
#include <Lock.h>
```

Public Member Functions

- [Lock](#) ()
- virtual [~Lock](#) ()
- void [lock](#) ()
- void [unlock](#) ()

8.14.1 Detailed Description

Wrapper class for pthread mutexes.

Definition at line 25 of file Lock.h.

8.14.2 Constructor & Destructor Documentation

8.14.2.1 USU::Lock::Lock () [inline]

Constructor: Creates the pthread-mutex

Definition at line 45 of file Lock.h.

8.14.2.2 USU::Lock::~~Lock () [inline, virtual]

Destructor: Frees the pthread-mutex

Definition at line 55 of file Lock.h.

8.14.3 Member Function Documentation

8.14.3.1 void USU::Lock::lock () [inline]

Locks the mutex

Definition at line 66 of file Lock.h.

8.14.3.2 void USU::Lock::unlock() [inline]

Unlocks the mutex

Definition at line 72 of file Lock.h.

The documentation for this class was generated from the following file:

- include/[Lock.h](#)

8.15 LSM303 Class Reference

Class to manage communication to the [LSM303](#) compass via the I2C-bus.

```
#include <LSM303.h>
```

Public Member Functions

- [LSM303](#) (const char *i2cDeviceName)
Constructor.
- void [enable](#) (void)
Puts both (accelerometer and magnetometer) into active sampling mode.
- void [writeAccReg](#) (uint8_t reg, uint8_t value)
Write value to the accelerometer register reg.
- uint8_t [readAccReg](#) (uint8_t reg)
Read the value from accelerometer register reg.
- void [writeMagReg](#) (uint8_t reg, uint8_t value)
Write value to the magnetometer register reg.
- uint8_t [readMagReg](#) (uint8_t reg)
Read the value from magnetometer register reg.
- void [readAcc](#) (void)
Reads the current raw acceleration vector into [a](#).
- void [readMag](#) (void)
Reads the current raw magnetic field vector into [m](#).
- void [read](#) (void)
Read both (accelerometer and magnetometer) into [a](#) and [m](#) respectively.

Public Attributes

- int [a](#) [3]
- int [m](#) [3]

8.15.1 Detailed Description

Class to manage communication to the [LSM303](#) compass via the I2C-bus.

[LSM303](#) has a 3-axis accelerometer and a 3-axis magnetometer on a single chip and the same I2C-bus. This class manages the interface to both of them and handles the read out procedure for the analog values. Check the data sheet for more details of the settings.

Definition at line 88 of file LSM303.h.

8.15.2 Constructor & Destructor Documentation

8.15.2.1 **LSM303::LSM303** (*const char * i2cDeviceName*)

Constructor.

Sets up the accelerometer and magnetometer on the given I2C-bus.

Parameters

<i>i2cDevice-Name</i>	Device name of the I2C-bus
-----------------------	----------------------------

Definition at line 22 of file LSM303.cpp.

8.15.3 Member Function Documentation

8.15.3.1 **void LSM303::enable** (*void*)

Puts both (accelerometer and magnetometer) into active sampling mode.

Definition at line 49 of file LSM303.cpp.

8.15.3.2 **void LSM303::read** (*void*)

Read both (accelerometer and magnetometer) into [a](#) and [m](#) respectively.

Definition at line 119 of file LSM303.cpp.

8.15.3.3 **void LSM303::readAcc** (*void*)

Reads the current raw acceleration vector into [a](#).

Definition at line 94 of file LSM303.cpp.

8.15.3.4 **uint8_t LSM303::readAccReg** (*uint8_t reg*)

Read the value from accelerometer register *reg*.

Parameters

<i>reg</i>	Register address to read from
------------	-------------------------------

Returns

uint8_t Value read from the register *reg*

Definition at line 32 of file LSM303.cpp.

8.15.3.5 void LSM303::readMag (void)

Reads the current raw magnetic field vector into [m](#).

Definition at line 104 of file LSM303.cpp.

8.15.3.6 uint8_t LSM303::readMagReg (uint8_t *reg*)

Read the value from magnetometer register *reg*.

Parameters

<i>reg</i>	Register address to read from
------------	-------------------------------

Returns

uint8_t Value read from the register *reg*

Definition at line 27 of file LSM303.cpp.

8.15.3.7 void LSM303::writeAccReg (uint8_t *reg*, uint8_t *value*)

Write value to the accelerometer register *reg*.

Parameters

<i>reg</i>	Register address to write to
<i>value</i>	Value to write to the register <i>reg</i>

Definition at line 42 of file LSM303.cpp.

8.15.3.8 void LSM303::writeMagReg (uint8_t *reg*, uint8_t *value*)

Write value to the magnetometer register *reg*.

Parameters

<i>reg</i>	Register address to write to
<i>value</i>	Value to write to the register <i>reg</i>

Definition at line 37 of file LSM303.cpp.

8.15.4 Member Data Documentation

8.15.4.1 int LSM303::a[3]

Raw accelerometer readings

Definition at line 91 of file LSM303.h.

8.15.4.2 int LSM303::m[3]

Magnetometer readings

Definition at line 92 of file LSM303.h.

The documentation for this class was generated from the following files:

- include/[LSM303.h](#)
- src/[LSM303.cpp](#)

8.16 USU::Max127 Class Reference

Class representing the MAX127 ADC.

```
#include <max127.h>
```

Public Member Functions

- [Max127](#) (const char *i2cdevice)
Constructor.
- int16_t [readRaw](#) (uint8_t channel)
Returns the raw integer measurement of the selected channel.
- float [readVoltage](#) (unsigned int channel)
Returns the measurement of the selected channel in volts.

8.16.1 Detailed Description

Class representing the MAX127 ADC.

Provides simple functionality to read the channels. Uses the [I2CBus](#) class for communication.

Definition at line 52 of file max127.h.

8.16.2 Constructor & Destructor Documentation

8.16.2.1 Max127::Max127 (const char * *i2cdevice*)

Constructor.

Initializes the I2C-connection

Parameters

<i>i2cdevice</i>	device name of the i2c-bus (e.g. /dev/i2c-1)
------------------	--

Definition at line 14 of file max127.cpp.

8.16.3 Member Function Documentation

8.16.3.1 int16_t Max127::readRaw (uint8_t *channel*)

Returns the raw integer measurement of the selected channel.

At the moment assumens bipolar operation. The range is [-2048, 2047]

Parameters

<i>channel</i>	channel to read
----------------	-----------------

Returns

int16_t signed integer representing the measurement

Definition at line 20 of file max127.cpp.

8.16.3.2 float Max127::readVoltage (unsigned int *channel*)

Returns the measurement of the selected channel in volts.

At the moment assumes fullscale of 10 V (bipolar +-5V or unipolar)

Parameters

<i>channel</i>	channel to read
----------------	-----------------

Returns

float measured voltage in V

Definition at line 35 of file max127.cpp.

The documentation for this class was generated from the following files:

- [include/max127.h](#)
- [src/max127.cpp](#)

8.17 USU::MinImu Class Reference

Class to manage the communication to the Pololu MinIMU9.

```
#include <minimu.h>
```

Inheritance diagram for USU::MinImu:

Collaboration diagram for USU::MinImu:

Public Member Functions

- [MinImu](#) (const char *i2cDeviceName)
Constructor.
- virtual [vector readMag](#) ()
Reads the magnetometer and return a [vector](#) of raw values.
- virtual [vector readAcc](#) ()
Reads the accelerometer and return a [vector](#) with units in g.
- virtual [vector readGyro](#) ()
Reads the gyroscope and returns a [vector](#) with units in degrees/s.
- virtual void [enable](#) ()
Enables compass and gyroscope, i.e. starts the sampling on these devices.

Public Attributes

- [LSM303 compass](#)
- [L3G gyro](#)

8.17.1 Detailed Description

Class to manage the communication to the Pololu MinIMU9.

Definition at line 32 of file minimu.h.

8.17.2 Constructor & Destructor Documentation

8.17.2.1 MinImu::MinImu (const char * i2cDeviceName)

Constructor.

Initializes the compass and gyroscope.

Parameters

<i>i2cDevice-Name</i>	Name of the I2C device the IMU is connected to
-----------------------	--

Definition at line 5 of file minimu.cpp.

8.17.3 Member Function Documentation

8.17.3.1 void MinImu::enable (void) [virtual]

Enables compass and gyroscope, i.e. starts the sampling on these devices.

Implements [IMU](#).

Definition at line 11 of file minimu.cpp.

8.17.3.2 **vector** MinImu::readAcc (void) [virtual]

Reads the accelerometer and return a [vector](#) with units in g.

Returns

[vector](#)

Implements [IMU](#).

Definition at line 28 of file minimu.cpp.

8.17.3.3 **vector** MinImu::readGyro () [virtual]

Reads the gyroscope and returns a [vector](#) with units in degrees/s.

Returns

[vector](#)

Implements [IMU](#).

Definition at line 17 of file minimu.cpp.

8.17.3.4 **vector** MinImu::readMag (void) [virtual]

Reads the magnetometer and return a [vector](#) of raw values.

TODO: Transform into gauss?

Returns

[vector](#)

Implements [IMU](#).

Definition at line 39 of file minimu.cpp.

8.17.4 Member Data Documentation

8.17.4.1 **LSM303 USU::MinImu::compass**

Compass (i.e. Accelerometer and Magnetometer of the [IMU](#))

Definition at line 35 of file minimu.h.

8.17.4.2 L3G USU::Minimu::gyro

Gyroscope of the [IMU](#)

Definition at line 36 of file `minimu.h`.

The documentation for this class was generated from the following files:

- `include/minimu.h`
- `src/minimu.cpp`

8.18 USU::Motor Class Reference

Class which represents a motor.

```
#include <motor.h>
```

Public Member Functions

- [Motor](#) ([Beagle_GPIO](#) &[beagleGpio](#), [Beagle_GPIO::Pins](#) clockwise, [Beagle_GPIO::Pins](#) counterClockwise, [cPWM](#) &[pwm](#), [SetDutyCyle](#) dutyCycle)
Constructor.
- void [setSpeed](#) (int speed)
Set the speed of the motor in percent.
- int [getSpeed](#) () const
Return the current speed of the motor.

8.18.1 Detailed Description

Class which represents a motor.

It controls 2 digital pins to set motor spin direction and one PWM channel to set motor speed.

Definition at line 37 of file `motor.h`.

8.18.2 Constructor & Destructor Documentation

- 8.18.2.1 [Motor::Motor](#) ([Beagle_GPIO](#) & [beagleGpio](#), [Beagle_GPIO::Pins](#) clockwise, [Beagle_GPIO::Pins](#) counterClockwise, [cPWM](#) & [pwm](#), [SetDutyCyle](#) dutyCycle)

Constructor.

Parameters

<i>beagleGpio</i>	Reference to a Beagle_GPIO object to set the pins
<i>clockwise</i>	First pin needed to set motor direction
<i>counter-Clockwise</i>	Second pin needed to set motor direction
<i>pwm</i>	Reference to the cPWM-object, which controls the PWM
<i>dutyCycle</i>	Function to set the dutyCycle of the PWM-channel assigned to the motor

Definition at line 14 of file motor.cpp.

8.18.3 Member Function Documentation

8.18.3.1 `int USU::Motor::getSpeed () const` `[inline]`

Return the current speed of the motor.

Returns

int current Speed of the motor

Definition at line 63 of file motor.h.

8.18.3.2 `void Motor::setSpeed (int speed)`

Set the speed of the motor in percent.

Parameters

<i>speed</i>	desired motor speed (-100, 100)
--------------	---------------------------------

Definition at line 29 of file motor.cpp.

The documentation for this class was generated from the following files:

- include/[motor.h](#)
- src/[motor.cpp](#)

8.19 USU::MotorControl Class Reference

Represents the class for motor control.

```
#include <motorcontrol.h>
```

Public Member Functions

- [MotorControl](#) (const char *i2cDevice="/dev/i2c-3")

Constructor of the class.

- virtual [~MotorControl](#) ()
- void [calculateControlResponse](#) (Quaternion state)

Calculate the control response from the current state estimate.

- void [controlFromGyro](#) (Eigen::Vector3f gyro)

Uses a simple algorithm to control the speed only from gyro data.

- void [setMotor](#) (int motor, int dutyCycle)

For testing: sets the speed of a motor.

- void [getAnalog](#) (int motor, float &aOut1, float &aOut2)

For testing: returns the Analog measurements of a motor.

- void [getAnalog](#)s (float *aOut1, float *aOut2)

For testing: returns the Analog measurements of all motors.

- void [getDutyCycles](#) (int *dc)

For testing: returns the dutycycles of all motors.

- float [getPGain](#) () const
- void [setPGain](#) (float value)
- Eigen::Vector3f [getSetValue](#) () const
- void [setSetValue](#) (const Eigen::Vector3f value)

8.19.1 Detailed Description

Represents the class for motor control.

It initializes the interface to the 4 motors. It receives the last system state estimate from the Kalman filter, calculates the appropriate control response and sets the speed (duty cycle) of the motors.

TODO: Get the desired state from ground station to calculate the control response.

Definition at line 38 of file motorcontrol.h.

8.19.2 Constructor & Destructor Documentation

8.19.2.1 MotorControl::MotorControl (const char * i2cDevice = "/dev/i2c-3")

Constructor of the class.

Initializes the underlying GPIO-class, the PWMs, the 4 Motors and the ADC.

Parameters

<i>i2cDevice</i>	name of the i2cDevice of the ADC
------------------	----------------------------------

Definition at line 18 of file motorcontrol.cpp.

8.19.2.2 **MotorControl::~MotorControl ()** [virtual]

Definition at line 34 of file motorcontrol.cpp.

8.19.3 Member Function Documentation

8.19.3.1 **void MotorControl::calculateControlResponse (Quaternion *state*)**

Calculate the control response from the current state estimate.

TODO: Doesn't do anything at the moment

Parameters

<i>state</i>	the current state estimate from the IMU
--------------	---

TODO: Make some control magic

[...]

Definition at line 42 of file motorcontrol.cpp.

8.19.3.2 **void MotorControl::controlFromGyro (Eigen::Vector3f *gyro*)**

Uses a simple algorithm to control the speed only from gyro data.

Parameters

<i>gyro</i>	Vector with the current angular rates
-------------	---------------------------------------

Definition at line 49 of file motorcontrol.cpp.

8.19.3.3 **void MotorControl::getAnalog (int *motor*, float & *aOut1*, float & *aOut2*)**

For testing: returns the Analog measurements of a motor.

Parameters

<i>motor</i>	which motor [0..3]
<i>aOut1</i>	reference to a variable to store the first analog measurement
<i>aOut2</i>	reference to a variable to store the second analog measurement

Definition at line 68 of file motorcontrol.cpp.

8.19.3.4 **void MotorControl::getAnalog (float * *aOut1*, float * *aOut2*)**

For testing: returns the Analog measurements of all motors.

Parameters

<i>aOut1</i>	Float array to store the first analog measurement of each motor
<i>aOut2</i>	Float array to store the second analog measurement of each motor

Definition at line 74 of file motorcontrol.cpp.

8.19.3.5 void MotorControl::getDutyCycles (int * *dc*)

For testing: returns the dutycycles of all motors.

Parameters

<i>dc</i>	Int array to store the duty cycle of each motor
-----------	---

Definition at line 86 of file motorcontrol.cpp.

8.19.3.6 float MotorControl::getPGain () const

Definition at line 93 of file motorcontrol.cpp.

8.19.3.7 Eigen::Vector3f MotorControl::getSetValue () const

Definition at line 102 of file motorcontrol.cpp.

8.19.3.8 void MotorControl::setMotor (int *motor*, int *dutyCycle*)

For testing: sets the speed of a motor.

Parameters

<i>motor</i>	which motor [0..3]
<i>dutyCycle</i>	which speed [-100..100]

Definition at line 63 of file motorcontrol.cpp.

8.19.3.9 void MotorControl::setPGain (float *value*)

Definition at line 98 of file motorcontrol.cpp.

8.19.3.10 void MotorControl::setSetValue (const Eigen::Vector3f *value*)

Definition at line 107 of file motorcontrol.cpp.

The documentation for this class was generated from the following files:

- include/[motorcontrol.h](#)

- [src/motorcontrol.cpp](#)

8.20 MotorProgrammer Class Reference

Class which reads the input file and runs the trajectory for each motor.

```
#include <motorprogrammer.hpp>
```

Inheritance diagram for MotorProgrammer:

Collaboration diagram for MotorProgrammer:

Classes

- struct [Command](#)

Struct representing a single command point.

Public Member Functions

- [MotorProgrammer](#) (int priority, const char *inputFile, const char *outputFile, unsigned int period_us)
Constructor.
- virtual void [run](#) ()
Starts the thread.

Public Attributes

- volatile bool [mKeepRunning](#)

8.20.1 Detailed Description

Class which reads the input file and runs the trajectory for each motor.

Definition at line 37 of file motorprogrammer.hpp.

8.20.2 Constructor & Destructor Documentation

8.20.2.1 MotorProgrammer::MotorProgrammer (int priority, const char * inputFile, const char * outputFile, unsigned int period_us)

Constructor.

Prepares the underlying thread. Parses the input file.

Parameters

<i>priority</i>	Priority for the underlying RtThread
<i>inputFile</i>	filename of the input file
<i>outputFile</i>	filename of the output file
<i>period_us</i>	sampling time (in us) for the data collector thread

Definition at line 88 of file motorprogrammer.hpp.

8.20.3 Member Function Documentation

8.20.3.1 void MotorProgrammer::run () [virtual]

Starts the thread.

Sets the motors speeds according to the input file

Implements [USU::RtThread](#).

Definition at line 130 of file motorprogrammer.hpp.

8.20.4 Member Data Documentation

8.20.4.1 volatile bool MotorProgrammer::mKeepRunning

Possibility to interrupt thread

Definition at line 76 of file motorprogrammer.hpp.

The documentation for this class was generated from the following file:

- [examples/motorprogrammer.hpp](#)

8.21 MyThread Class Reference

Inheritance diagram for MyThread:

Collaboration diagram for MyThread:

Public Member Functions

- [MyThread](#) (int prio)
- void [run](#) ()

Actual method of the thread is running.

Public Attributes

- volatile bool [keepRunning](#)

8.21.1 Detailed Description

Definition at line 62 of file threading-example.cpp.

8.21.2 Constructor & Destructor Documentation

8.21.2.1 MyThread::MyThread (int prio) [inline]

Definition at line 65 of file threading-example.cpp.

8.21.3 Member Function Documentation

8.21.3.1 void MyThread::run () [inline, virtual]

Actual method of the thread is running.

Every child class has to implement this function in order to do some threaded work.

Implements [USU::PeriodicRtThread](#).

Definition at line 69 of file threading-example.cpp.

8.21.4 Member Data Documentation

8.21.4.1 volatile bool MyThread::keepRunning

Definition at line 87 of file threading-example.cpp.

The documentation for this class was generated from the following file:

- [examples/threading-example.cpp](#)

8.22 USU::PeriodicRtThread Class Reference

TODO: Make some proper exceptions.

```
#include <periodicrtthread.h>
```

Inheritance diagram for USU::PeriodicRtThread:

Collaboration diagram for USU::PeriodicRtThread:

Public Member Functions

- `PeriodicRtThread` (int priority=0, unsigned int period_us=1000000)
Creates the `PeriodicRtThread` object.
- virtual void `run` ()=0
Actual method of the thread is running.

Protected Member Functions

- void `makeThreadPeriodic` ()
Registers the Periodic timer.
- void `waitPeriod` ()
Blocks the thread until the next timer event.

8.22.1 Detailed Description

TODO: Make some proper exceptions.

Abstract wrapper class for a periodic thread using the pthread library with RT-priority

Based on `RtThread` this class uses pthread underneath but creates a periodic timer event it can wait for in a (forever) loop. This is more accurate than the use of nanosleep as the execution time of the loop will not be taken into account. It is therefore designed for periodic work where high accuracy is desired.

Definition at line 32 of file `periodicrtthread.h`.

8.22.2 Constructor & Destructor Documentation

8.22.2.1 `PeriodicRtThread::PeriodicRtThread (int priority = 0, unsigned int period_us = 1000000)`

Creates the [PeriodicRtThread](#) object.

Calls the constructor of the parent [RtThread](#) and registers the periodic timer

Parameters

<i>priority</i>	the Priority of the Thread (Linux: 1..99)
<i>period_us</i>	Period of the thread in us

Definition at line 22 of file `periodicrtthread.cpp`.

8.22.3 Member Function Documentation

8.22.3.1 `void PeriodicRtThread::makeThreadPeriodic ()` `[protected]`

Registers the Periodic timer.

TODO: create exception

Definition at line 29 of file `periodicrtthread.cpp`.

8.22.3.2 `virtual void USU::PeriodicRtThread::run ()` `[pure virtual]`

Actual method of the thread is running.

Every child class has to implement this function in order to do some threaded work.

Implements [USU::RtThread](#).

Implemented in [USU::KalmanFilter](#), [MyThread](#), [DataCollector](#), and [DataCollector](#).

8.22.3.3 `void PeriodicRtThread::waitPeriod ()` `[protected]`

Blocks the thread until the next timer event.

Waits the remaining time until the next timer event happens. Thus `waitTime = mPeriod_us - runtime since last timer event`

Definition at line 56 of file `periodicrtthread.cpp`.

The documentation for this class was generated from the following files:

- `include/periodicrtthread.h`
- `src/periodicrtthread.cpp`

8.23 USU::Quaternion Class Reference

Representation for receiving the [Quaternion](#) representation from the [IMU](#).

```
#include <messages.h>
```

Inheritance diagram for USU::Quaternion:

Collaboration diagram for USU::Quaternion:

Public Types

- enum { [size](#) = 23 }

Public Member Functions

- [Quaternion](#) ()
Creates an empty packet object.
- bool [readFromSerial](#) (SerialPort &serialPort)
Read the information for the structure from the SerialPort.
- virtual void [print](#) (std::ostream &os) const

Print the stored information to ostream object.

Public Attributes

- [quaternion quat](#)
- unsigned int [timer](#)

8.23.1 Detailed Description

Representation for receiving the [Quaternion](#) representation from the [IMU](#).

The class will return a [Quaternion](#) from the Eigen library

Definition at line 319 of file messages.h.

8.23.2 Member Enumeration Documentation

8.23.2.1 anonymous enum

Enumerator:

size

Definition at line 366 of file messages.h.

8.23.3 Constructor & Destructor Documentation

8.23.3.1 `USU::Quaternion::Quaternion ()` `[inline]`

Creates an empty packet object.

Definition at line 325 of file messages.h.

8.23.4 Member Function Documentation

8.23.4.1 `virtual void USU::Quaternion::print (std::ostream & os) const` `[inline, virtual]`

Print the stored information to ostream object.

$\text{quaternion} = w + i*x + j*y + k*z$

Format: timestamp,w,x,y,z

Parameters

<i>os</i>	
-----------	--

Implements [USU::GX3Packet](#).

Definition at line 357 of file messages.h.

8.23.4.2 `bool USU::Quaternion::readFromSerial (SerialPort & serialPort)`
`[inline, virtual]`

Read the information for the structure from the SerialPort.

Parameters

<i>serialPort</i>	serialPort object from libserial
-------------------	----------------------------------

Returns

bool true if reading (and checksum) was successful, false otherwise

Implements [USU::GX3Packet](#).

Definition at line 327 of file messages.h.

8.23.5 Member Data Documentation

8.23.5.1 `quaternion USU::Quaternion::quat`

Eigen::Quaternionf representing the Orientation of the [IMU](#)

Definition at line 362 of file messages.h.

8.23.5.2 `unsigned int USU::Quaternion::timer`

The value of the timestamp for the package

Definition at line 364 of file messages.h.

The documentation for this class was generated from the following file:

- include/[messages.h](#)

8.24 USU::RawAccAng Class Reference

Representation for receiving (raw) acceleration & angular rate packets.

```
#include <messages.h>
```

Inheritance diagram for USU::RawAccAng:

Collaboration diagram for USU::RawAccAng:

Public Types

- enum { [size](#) = 31 }

Public Member Functions

- [RawAccAng](#) ()
Creates an empty packet object.
- bool [readFromSerial](#) (SerialPort &serialPort)
Read the information for the structure from the SerialPort.
- virtual void [print](#) (std::ostream &os) const
Print the stored information to ostream object.

Public Attributes

- [vector acc](#)
- [vector gyro](#)
- unsigned int [timer](#)

8.24.1 Detailed Description

Representation for receiving (raw) acceleration & angular rate packets.

This class can be used with the commands for raw acceleration and angular rates and acceleration and angular rate. For the latter the units are:

- acceleration: g
- angular rate: rad/s For the units of the raw values see the protocol data sheet.

Definition at line 190 of file messages.h.

8.24.2 Member Enumeration Documentation

8.24.2.1 anonymous enum

Enumerator:

size

Definition at line 238 of file messages.h.

8.24.3 Constructor & Destructor Documentation

8.24.3.1 USU::RawAccAng::RawAccAng () `[inline]`

Creates an empty packet object.

Definition at line 196 of file messages.h.

8.24.4 Member Function Documentation

8.24.4.1 virtual void USU::RawAccAng::print (std::ostream & os) const `[inline, virtual]`

Print the stored information to ostream object.

Format: timestamp,accX,accY,accZ,gyroX,gyroY,gyroZ

Parameters

<i>os</i>	
-----------	--

Implements [USU::GX3Packet](#).

Definition at line 227 of file messages.h.

8.24.4.2 `bool USU::RawAccAng::readFromSerial (SerialPort & serialPort)`
`[inline, virtual]`

Read the information for the structure from the SerialPort.

Parameters

<i>serialPort</i>	serialPort object from libserial
-------------------	----------------------------------

Returns

bool true if reading (and checksum) was successful, false otherwise

Implements [USU::GX3Packet](#).

Definition at line 198 of file messages.h.

8.24.5 Member Data Documentation

8.24.5.1 `vector USU::RawAccAng::acc`

Vector containing the accelerometer data

Definition at line 233 of file messages.h.

8.24.5.2 `vector USU::RawAccAng::gyro`

Vector containing the gyroscope (angular rate) data

Definition at line 234 of file messages.h.

8.24.5.3 `unsigned int USU::RawAccAng::timer`

The value of the timestamp for the package

Definition at line 236 of file messages.h.

The documentation for this class was generated from the following file:

- include/[messages.h](#)

8.25 USU::RtThread Class Reference

Abstract wrapper class for the pthread library with RT-priority.

```
#include <RtThread.h>
```

Inheritance diagram for USU::RtThread:

Public Member Functions

- [RtThread](#) (int priority=0)
Creates the [RtThread](#) object.
- virtual [~RtThread](#) ()
Destructor of the [RtThread](#) object.
- pthread_t [getThreadId](#) () const
Return the pthread handle.
- int [getPriority](#) () const
Returns the priority of the thread.
- void [start](#) (void *args=NULL)
Creates and starts the pthread.
- bool [join](#) (int timeout_ms=0)
Waits for the thread to join.
- virtual void [run](#) ()=0
Actual method of the thread is running.

Static Protected Member Functions

- static void * [exec](#) (void *thr)
Function passed to pthread_create, do not call manually!

Protected Attributes

- pthread_t [mId](#)
- bool [mStarted](#)
- void * [mArgs](#)

8.25.1 Detailed Description

Abstract wrapper class for the pthread library with RT-priority.

This class is a thin wrapper for the pthread library. Inherited classes need to implement the run function with the tasks for the thread. The thread will run with the SCHED_FIFO-scheduler at the set priority. Therefore root rights are necessary for changing the scheduling policy.

3

Definition at line 32 of file RtThread.h.

8.25.2 Constructor & Destructor Documentation

8.25.2.1 RtThread::RtThread (int *priority* = 0)

Creates the [RtThread](#) object.

Prepares the Attribute object which is passed to pthread_create later.

Parameters

<i>priority</i>	the Priority of the Thread (Linux: 1..99)
-----------------	---

Definition at line 19 of file RtThread.cpp.

8.25.2.2 RtThread::~~RtThread () [virtual]

Destructor of the [RtThread](#) object.

Waits for the thread to join (if not already) and releases the Attributes object.

Definition at line 62 of file RtThread.cpp.

8.25.3 Member Function Documentation

8.25.3.1 void * RtThread::exec (void * *thr*) [static, protected]

Function passed to pthread_create, do not call manually!

This function builds the interface to the pthread library. Only purpose is to be compatible to pthread_create, as it will immediately call run of this class.

Parameters

<i>thr</i>	pointer to this instance of the class.
------------	--

Definition at line 141 of file RtThread.cpp.

8.25.3.2 `int RtThread::getPriority () const [inline]`

Returns the priority of the thread.

Returns

int priority

Definition at line 84 of file RtThread.cpp.

8.25.3.3 `pthread_t RtThread::getThreadId () const [inline]`

Return the pthread handle.

Returns

pthread_t the thread handle of the last started pthread or -1 (if no pthread was started)

Definition at line 78 of file RtThread.cpp.

8.25.3.4 `bool RtThread::join (int timeout.ms = 0)`

Waits for the thread to join.

Parameters

<i>timeout.ms</i>	timeout in ms (optional). 0 means no timeout
-------------------	--

Returns

bool returns true if thread joined successfully and false if error occurred

Definition at line 110 of file RtThread.cpp.

8.25.3.5 `virtual void USU::RtThread::run () [pure virtual]`

Actual method of the thread is running.

Every child class has to implement this function in order to do some threaded work.

Implemented in [USU::PeriodicRtThread](#), [USU::GX3Communicator](#), [MotorProgrammer](#), [USU::KalmanFilter](#), [MyThread](#), [DataCollector](#), and [DataCollector](#).

8.25.3.6 `void RtThread::start (void * args = NULL)`

Creates and starts the pthread.

Creates the pthread with the desired attributes.

Parameters

<i>args</i>	optional arguments for the thread
-------------	-----------------------------------

Definition at line 89 of file RtThread.cpp.

8.25.4 Member Data Documentation

8.25.4.1 void* **USU::RtThread::mArgs** [protected]

Arguments which can be passed to a certain thread thread

Definition at line 45 of file RtThread.h.

8.25.4.2 pthread_t **USU::RtThread::mId** [protected]

The thread handle

Definition at line 43 of file RtThread.h.

8.25.4.3 bool **USU::RtThread::mStarted** [protected]

Keeps the status of the thread TODO: Useful??

Definition at line 44 of file RtThread.h.

The documentation for this class was generated from the following files:

- [include/RtThread.h](#)
- [src/RtThread.cpp](#)

8.26 USU::SamplingSettings Class Reference

Represents the "Sampling Settings" command.

```
#include <messages.h>
```

Inheritance diagram for USU::SamplingSettings:

Collaboration diagram for USU::SamplingSettings:

Public Types

- enum `FunctionSelector` { `ReturnOnly` = 0, `Change` = 1, `ChangeAndSave` = 2, `ChangeWithoutReply` = 3 }
- Sets the function Selector.*
- enum `DataConditioning` { `FlagCalcOrientation` = 0x01, `FlagEnableConing-Sculling` = 0x02, `FlagDefault` = 0x03, `FlagFloatLittleEndian` = 0x10, `FlagSuppressNaN` = 0x20, `FlagFiniteSizeCorrection` = 0x40, `FlagDisableMag` = 0x100, `FlagDisableMagNorthComp` = 0x400, `FlagDisableGravComp` = 0x800, `FlagEnableQuaternion` = 0x1000 }
- Flags for the Data conditioning.*
- enum { `size` = 20, `responseSize` = 19 }

Public Member Functions

- [SamplingSettings](#) ([FunctionSelector](#) funSel, uint16_t samplingPeriod_ms=10, uint16_t dataCondFlags=[SamplingSettings::FlagDefault](#), uint8_t gyroAccFilter=15, uint8_t magFilter=17, uint16_t upCompensation=10, uint16_t northCompensation=10, uint8_t magPower=0)

Creates the command.

- bool [sendCommand](#) (SerialPort &serialPort)
- bool [checkResponse](#) (uint8_t *buffer)

Checks if the response to this command has the correct setup.

Public Attributes

- uint8_t [mCommand](#) [[size](#)]

8.26.1 Detailed Description

Represents the "Sampling Settings" command.

Definition at line 511 of file messages.h.

8.26.2 Member Enumeration Documentation

8.26.2.1 anonymous enum

Enumerator:

size

responseSize

Definition at line 627 of file messages.h.

8.26.2.2 enum [USU::SamplingSettings::DataConditioning](#)

Flags for the Data conditioning.

Sets the bits for Data conditioning bytes. Combine multiple flags using the "or" operator ("|")

Enumerator:

FlagCalcOrientation

FlagEnableConingSculling

FlagDefault

FlagFloatLittleEndian

FlagSuppressNaN

FlagFiniteSizeCorrection
FlagDisableMag
FlagDisableMagNorthComp
FlagDisableGravComp
FlagEnableQuaternion

Definition at line 536 of file messages.h.

8.26.2.3 enum USU::SamplingSettings::FunctionSelector

Sets the function Selector.

The function selector has 4 states:

- ReturnOnly: Does not change the Sampling Settings, only returns the current state
- Change: Set new Sampling settings, but do not store them in non-volatile memory (will be reset after shutdown)
- ChangeAndSave: Set new Sampling Settings and store them in non-volatile memory (will be permanent)
- ChangeWithoutReply: As Change but no response is sent

Enumerator:

ReturnOnly
Change
ChangeAndSave
ChangeWithoutReply

Definition at line 525 of file messages.h.

8.26.3 Constructor & Destructor Documentation

**8.26.3.1 USU::SamplingSettings::SamplingSettings (FunctionSelector
funSel, uint16_t *samplingPeriod_ms* = 10, uint16_t *dataCondFlags* =
 SamplingSettings::FlagDefault, uint8_t *gyroAccFilter* = 15, uint8_t *magFilter* =
 17, uint16_t *upCompensation* = 10, uint16_t *northCompensation* = 10, uint8_t
magPower = 0) [inline]**

Creates the command.

Allocates a buffer for the byte commands. Sets the static bytes and fills the settings bytes based on the passed parameters.

Parameters

<i>funSel</i>	Sets the functions selector
<i>sampling-Period_ms</i>	Sets the sampling period in ms (1 to 1000)
<i>dataCond-Flags</i>	Sets general behaviour of the 3DM; use DataConditioning-flags
<i>gyroAcc-Filter</i>	Sets the filter value for the gyro and accelerometer
<i>magFilter</i>	Sets the filter value for the magnetometer
<i>up-Compensation</i>	Sets the time for up compensation
<i>north-Compensation</i>	Sets the time for north compensation
<i>magPower</i>	Sets the Power state

Definition at line 566 of file messages.h.

8.26.4 Member Function Documentation

8.26.4.1 `bool USU::SamplingSettings::checkResponse (uint8_t * buffer)`
`[inline, virtual]`

Checks if the response to this command has the correct setup.

Parameters

<i>buffer</i>	pointer to the byte array containing the response from the 3DM
---------------	--

Returns

bool true if the response is correct, false if it suggests an error

Implements [USU::GX3Command](#).

Definition at line 612 of file messages.h.

8.26.4.2 `bool USU::SamplingSettings::sendCommand (SerialPort & serialPort)`
`[inline, virtual]`

Implements [USU::GX3Command](#).

Definition at line 595 of file messages.h.

8.26.5 Member Data Documentation

8.26.5.1 `uint8_t USU::SamplingSettings::mCommand[size]`

Buffer which contains the byte array for the command

Definition at line 628 of file messages.h.

The documentation for this class was generated from the following file:

- include/[messages.h](#)

8.27 USU::ScopedLock Class Reference

Provides a helper class for Scoped Mutexes.

```
#include <Lock.h>
```

Public Member Functions

- [ScopedLock](#) ([Lock](#) &lock)
Constructor: will lock the mutex.
- virtual [~ScopedLock](#) ()
Destructor: will unlock the mutex.

8.27.1 Detailed Description

Provides a helper class for Scoped Mutexes.

Create this object by passing a reference to a [Lock](#) object. It will lock the mutex when created and unlock it when destroyed, i.e. when going out of scope at the end of the "}". Can make it more convenient than manual (un)locking.

TODO: Test if it works correctly with a getter-method

Definition at line 92 of file Lock.h.

8.27.2 Constructor & Destructor Documentation

8.27.2.1 USU::ScopedLock::ScopedLock ([Lock](#) & *lock*) `[inline]`

Constructor: will lock the mutex.

Parameters

<i>lock</i>	Reference to the Lock it needs to hold
-------------	--

Definition at line 115 of file Lock.h.

8.27.2.2 USU::ScopedLock::~~ScopedLock () `[inline, virtual]`

Destructor: will unlock the mutex.

Definition at line 122 of file Lock.h.

The documentation for this class was generated from the following file:

- include/[Lock.h](#)

8.28 USU::Semaphore Class Reference

Wrapper class for semaphores.

```
#include <semaphore.h>
```

Public Member Functions

- [Semaphore](#) ()
- virtual [~Semaphore](#) ()
- void [post](#) ()
- void [wait](#) ()
Trys to get the semaphore, blocking.
- bool [tryWait](#) ()
Trys to get the semaphore, non-blocking.

8.28.1 Detailed Description

Wrapper class for semaphores.

Definition at line 27 of file semaphore.h.

8.28.2 Constructor & Destructor Documentation

8.28.2.1 USU::Semaphore::Semaphore ()

Constructor: Creates the pthread-Semaphore

Definition at line 63 of file semaphore.h.

8.28.2.2 USU::Semaphore::~~Semaphore () [virtual]

Destructor: Frees the pthread-Semaphore

Definition at line 72 of file semaphore.h.

8.28.3 Member Function Documentation

8.28.3.1 void USU::Semaphore::post () [inline]

Increases the semaphore by 1

Definition at line 82 of file semaphore.h.

8.28.3.2 bool USU::Semaphore::tryWait () [inline]

Trys to get the semaphore, non-blocking.

Takes the semaphore by decreasing the counter by 1, will return if the counter = 0.

Returns

bool false if semaphore was empty, true if semaphore was successfully acquired

Definition at line 94 of file semaphore.h.

8.28.3.3 void USU::Semaphore::wait () [inline]

Trys to get the semaphore, blocking.

Takes the semaphore by decreasing the counter by 1, will wait for the semaphore to be given if the counter = 0.

Definition at line 88 of file semaphore.h.

The documentation for this class was generated from the following file:

- include/[semaphore.h](#)

8.29 USU::SetContinuousMode Class Reference

Represents the "Set continuous mode" command.

```
#include <messages.h>
```

Inheritance diagram for USU::SetCountinuousMode:

Collaboration diagram for USU::SetCountinuousMode:

Public Types

- enum { [size](#) = 4, [responseSize](#) = 8 }

Public Member Functions

- [SetCountinuousMode](#) (uint8_t CommandByte=0)
Creates the command.
- bool [sendCommand](#) (SerialPort &serialPort)
- bool [checkResponse](#) (uint8_t *buffer)
Checks if the response to this command has the correct setup.

Public Attributes

- uint8_t [mCommand](#) [[size](#)]

8.29.1 Detailed Description

Represents the "Set continuous mode" command.

Definition at line 454 of file messages.h.

8.29.2 Member Enumeration Documentation

8.29.2.1 anonymous enum

Enumerator:

size
responseSize

Definition at line 504 of file messages.h.

8.29.3 Constructor & Destructor Documentation

8.29.3.1 USU::SetCountinuousMode::SetCountinuousMode (uint8_t *CommandByte* = 0) [[inline](#)]

Creates the command.

Allocates a buffer for the byte commands. Sets the static bytes and fills the settings bytes based on the passed parameters.

Parameters

<i>Command-Byte</i>	Command code of the command which is to be executed periodically (Default stop continuous mode)
---------------------	---

Definition at line 466 of file messages.h.

8.29.4 Member Function Documentation

8.29.4.1 bool USU::SetCountinuousMode::checkResponse (uint8_t * *buffer*) [[inline](#), [virtual](#)]

Checks if the response to this command has the correct setup.

Parameters

<i>buffer</i>	pointer to the byte array containing the response from the 3DM
---------------	--

Returns

bool true if the response is correct, false if it suggests an error

Implements [USU::GX3Command](#).

Definition at line 491 of file messages.h.

8.29.4.2 `bool USU::SetCountinuousMode::sendCommand (SerialPort & serialPort)`
`[inline, virtual]`

Implements [USU::GX3Command](#).

Definition at line 474 of file messages.h.

8.29.5 Member Data Documentation

8.29.5.1 `uint8_t USU::SetCountinuousMode::mCommand[size]`

Buffer which contains the byte array for the command

Definition at line 505 of file messages.h.

8.31 USU::SharedQueue< T > Class Template Reference

Wrapper class to make std::queue thread safe.

```
#include <sharedqueue.h>
```

Public Member Functions

- void [push](#) (const T &newElement)
Constructor, creates an empty queue.
- void [pop](#) ()
Destroys the first (oldest) element in the queue.
- T & [front](#) ()
Returns a reference to the first (oldest) element in the queue.
- bool [isEmpty](#) ()

Indicates if the queue is empty.

- int `size` ()

8.31.1 Detailed Description

```
template<class T>class USU::SharedQueue< T >
```

Wrapper class to make `std::queue` thread safe.

Protects the push, pop and front access from thread using a mutex. It can only handle one reader and one writer thread at a time. Multiple reader threads could produce race conditions!!!

3

Definition at line 35 of file `sharedqueue.h`.

8.31.2 Member Function Documentation

8.31.2.1 `template<class T> T& USU::SharedQueue< T >::front () [inline]`

Returns a reference to the first (oldest) element in the queue.

Takes a mutex before accesing the first element.

Returns

T

Definition at line 77 of file `sharedqueue.h`.

8.31.2.2 `template<class T> bool USU::SharedQueue< T >::isEmpty () [inline]`

Indicates if the queue is empty.

Returns

bool true if empty, false otherwise

Definition at line 88 of file `sharedqueue.h`.

8.31.2.3 `template<class T> void USU::SharedQueue< T >::pop () [inline]`

Destroys the first (oldest) element in the queue.

Takes mutex before the write operation. Calls the destroy operator of the current front-element.

Definition at line 64 of file `sharedqueue.h`.

8.31.2.4 `template<class T> void USU::SharedQueue< T >::push (const T &
newElement) [inline]`

Constructor, creates an empty queue.

Adds a new element to the back of the queue

Takes the mutex before the write operation.

Parameters

<i>newElement</i>	the element to be added
-------------------	-------------------------

Definition at line 51 of file `sharedqueue.h`.

8.31.2.5 `template<class T> int USU::SharedQueue< T >::size () [inline]`

Definition at line 94 of file `sharedqueue.h`.

The documentation for this class was generated from the following file:

- `include/sharedqueue.h`

9.9.1 Function Documentation

9.9.1.1 void endProgram (int s)

Definition at line 93 of file threading-example.cpp.

9.9.1.2 int main ()

Definition at line 107 of file threading-example.cpp.

9.9.2 Variable Documentation

9.9.2.1 MyThread thr1(5)

9.9.2.2 MyThread thr2(4)

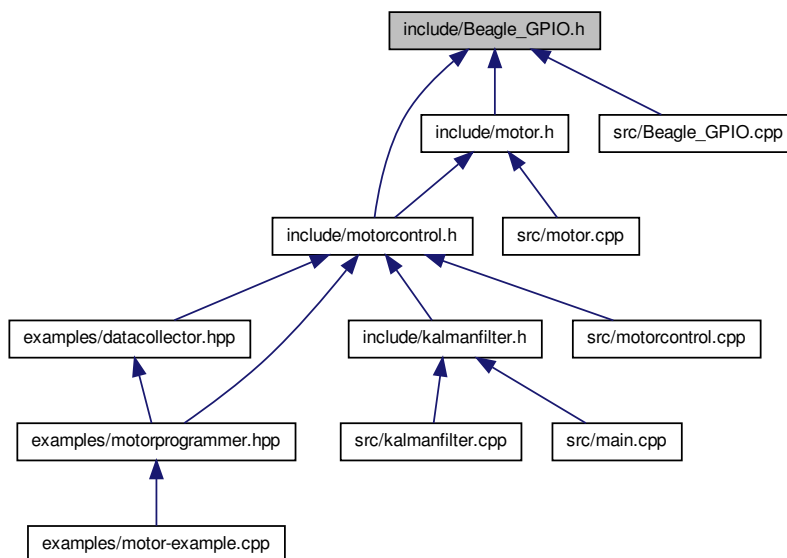

9.10 include/Beagle_GPIO.h File Reference

```
#include <iostream> #include <sys/ioctl.h> #include <linux/types.-  
h> #include <linux/spi/spidev.h> Include dependency graph for Beagle-
```

_GPIO.h:

This graph shows which files directly or indirectly include this file:

Classes

- class [Beagle_GPIO](#)

Wrapper class to access the GPIOs of the BeagleBone.

Defines

- `#define GPIO_ERROR(msg) std::cout << "[GPIO] Error : " << msg << std::endl;`
- `#define BEAGLE_GPIO_DEBUG`
- `#define GPIO_PRINT(msg) std::cout << "[GPIO] : " << msg << std::endl;`
- `#define gp_assert(condition)`

9.10.1 Define Documentation

9.10.1.1 `#define BEAGLE_GPIO_DEBUG`

Definition at line 29 of file Beagle_GPIO.h.

9.10.1.2 `#define gp_assert(condition)`

Value:

```
if (!(condition))
{
    GPIO_ERROR( "Assert Failed in file '" << __FILE__ << "'
on line " << __LINE__ );
    exit(0);
}
```

Definition at line 32 of file Beagle_GPIO.h.

9.10.1.3 `#define GPIO_ERROR(msg) std::cout << "[GPIO] Error : " << msg << std::endl;`

Definition at line 27 of file Beagle_GPIO.h.

9.10.1.4 `#define GPIO_PRINT(msg) std::cout << "[GPIO] : " << msg << std::endl;`

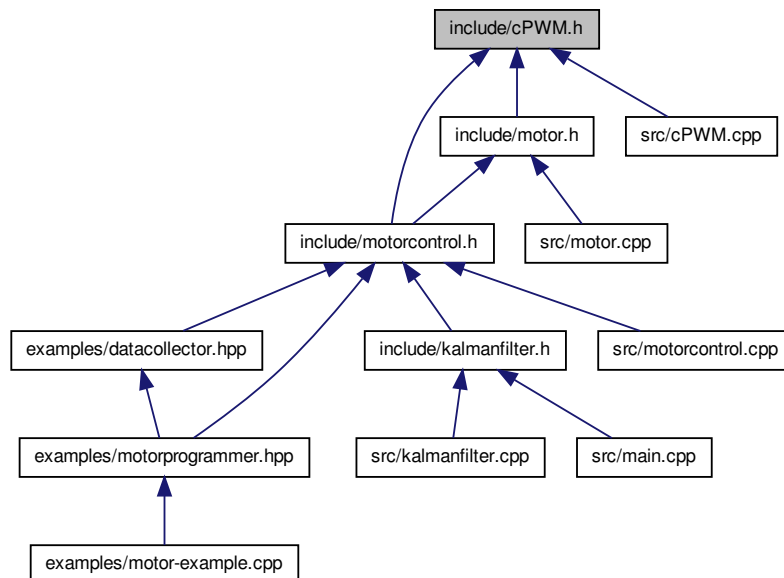

Definition at line 31 of file Beagle_GPIO.h.

9.11 include/cPWM.h File Reference

`#include <fstream>` Include dependency graph for cPWM.h:

This graph shows which files directly or indirectly include this file:

Classes

- class `cPWM`

Wrapper class to access the PWM-devices of the BeagleBone.

Defines

- `#define SYSFS_EHRPWM_PREFIX "/sys/class/pwm/ehrpwm."`
- `#define SYSFS_EHRPWM_SUFFIX_A ":0"`
- `#define SYSFS_EHRPWM_SUFFIX_B ":1"`

9.14 include/gx3communicator.h File Reference

`#include <SerialPort.h> #include <memory> #include "Rt-Thread.h" #include "sharedqueue.h" #include "messages.h"`

This graph shows which files directly or indirectly include this file:

Classes

- class [USU::GX3Communicator](#)

Namespaces

- namespace [USU](#)

TODO: Make some proper exceptions.

Typedefs

- typedef `std::shared_ptr < GX3Packet >` [USU::packet_ptr](#)

Represents the Thread class for communication with the 3DM-GX3-25.

9.14.1 Detailed Description

Contains the thread which handles the communication to the 3DM-GX3-25.

Author

Jan Sommer Created on: Apr 26, 2013

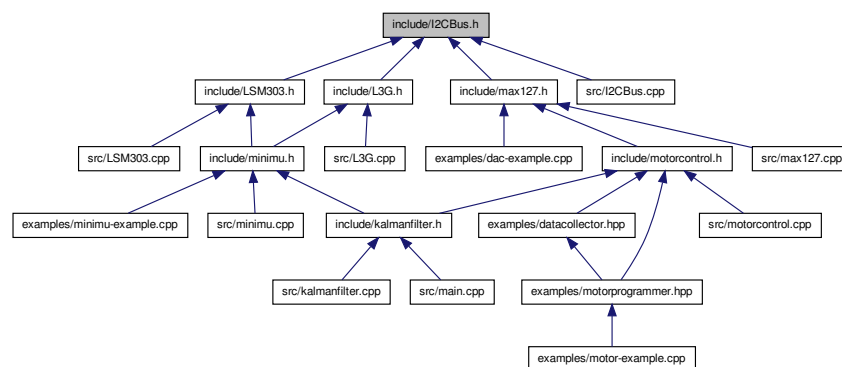

Definition in file [gx3communicator.h](#).

9.15 include/I2CBus.h File Reference

`#include <stdint.h> #include "exceptions.h"` Include dependency graph for I2CBus.h:

This graph shows which files directly or indirectly include this file:

Classes

- class [I2CBus](#)

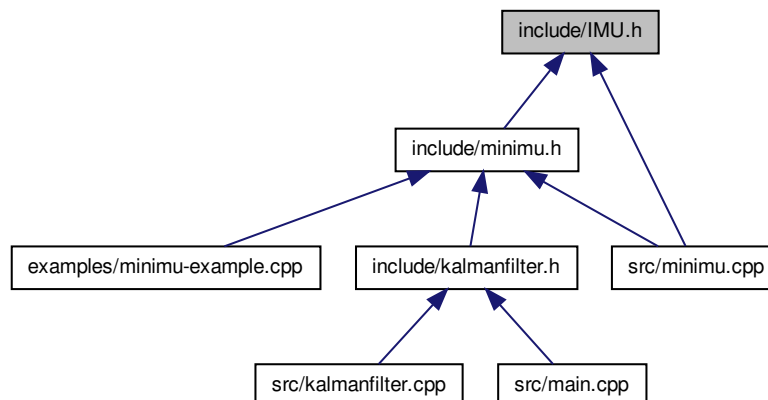

Wrapper class for I2C-bus communication.

9.16 include/IMU.h File Reference

`#include "vector.h"` Include dependency graph for IMU.h:

This graph shows which files directly or indirectly include this file:

Classes

- class [IMU](#)

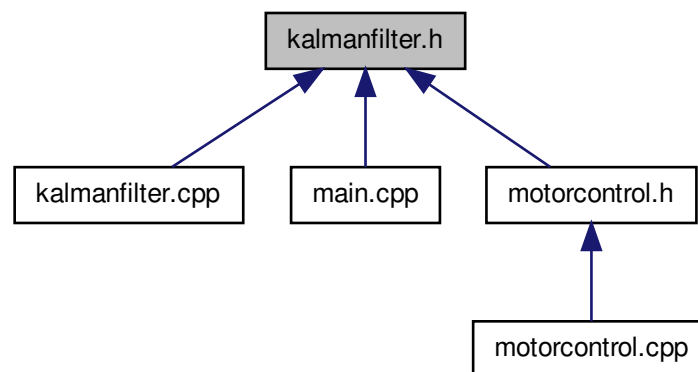

Virtual base class for [IMU](#).

9.17 include/kalmanfilter.h File Reference

```
#include "periodicrtthread.h" #include "minimu.h" #include
"Lock.h" #include "gx3communicator.h" #include "messages.-
h" #include "motorcontrol.h" Include dependency graph for kalmanfilter.h:
```

This graph shows which files directly or indirectly include this file:

Classes

- class [USU::KalmanFilter](#)

Represents the Periodic Thread class for state estimation.

- struct [USU::KalmanFilter::Command](#)

Struct representing a single command point.

Namespaces

- namespace [USU](#)

TODO: Make some proper exceptions.

9.17.1 Detailed Description

C++ class for the sensor fusion and state estimated. Based on the PeriodicRtThread class.

Author

Jan Sommer Created on: Apr 20, 2013

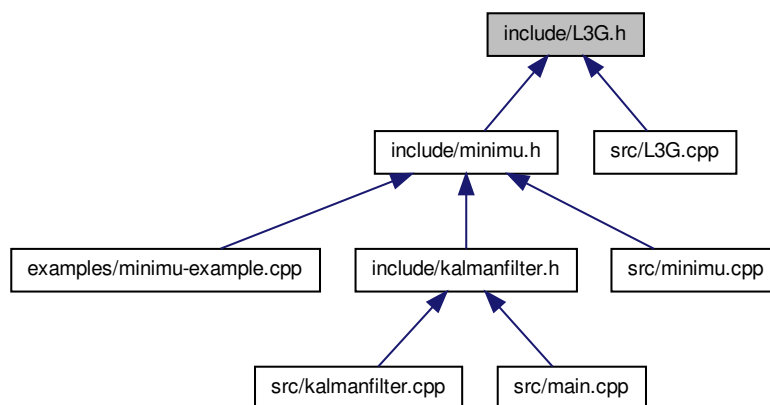

Definition in file [kalmanfilter.h](#).

9.18 include/L3G.h File Reference

`#include "I2CBus.h"` Include dependency graph for L3G.h:

This graph shows which files directly or indirectly include this file:

Classes

- class [L3G](#)

Class to manage the communication to the [L3G](#) gyroscope via the I2C-bus.

9.21 include/max127.h File Reference

`#include <stdint.h> #include "I2CBus.h"` Include dependency graph for max127.h:

This graph shows which files directly or indirectly include this file:

Classes

- class [USU::Max127](#)
Class representing the MAX127 ADC.

Namespaces

- namespace [USU](#)
TODO: Make some proper exceptions.

Variables

- const uint8_t [USU::I2C_ADDRESS](#) = 0b00101000
I2C-address of the ADC.
- const uint8_t [USU::CONTROL_BYTE](#) = 0b10000110
Template of the control byte.
- const uint8_t [USU::SELO](#) = 4

9.21.1 Detailed Description

C++ class for the ADC Max127.

Author

Jan Sommer Created on: May 20, 2013

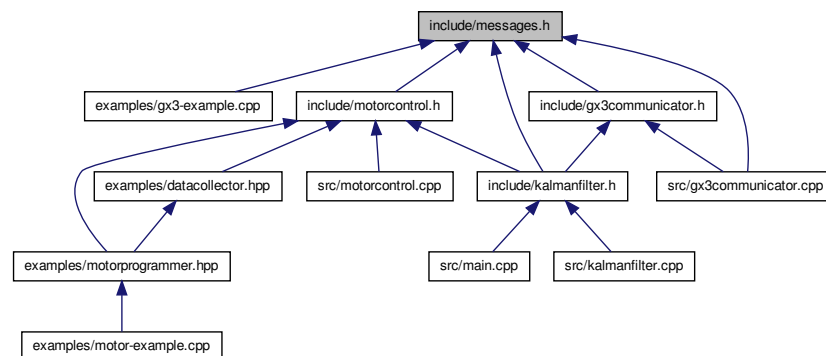

Definition in file [max127.h](#).

9.22 include/messages.h File Reference

```
#include <stdint.h>    #include <stdexcept>    #include <-
SerialPort.h>    #include <iostream>    #include <iomanip> ×
#include "vector.h" Include dependency graph for messages.h:
```

This graph shows which files directly or indirectly include this file:

**Classes**

- class [USU::GX3Packet](#)
Abstract base class for received packets.

- class [USU::RawAccAng](#)
Representation for receiving (raw) acceleration & angular rate packets.
- class [USU::AccAngMag](#)
Representation for receiving acceleration, angular rate and magnetometer packets.
- class [USU::Quaternion](#)
Representation for receiving the [Quaternion](#) representation from the [IMU](#).
- class [USU::AccAngMagOrientationMat](#)
Representation for packets containing the 3 sensor vectors and orientation matrix This class can be used with the commands which return 3 Vectors and a 3x3 Matrix. The units are:
- class [USU::GX3Command](#)
Base class for commands send to the 3DM-GX3-25.
- class [USU::SetContinuousMode](#)
Represents the "Set continuous mode" command.
- class [USU::SamplingSettings](#)
Represents the "Sampling Settings" command.

Namespaces

9.22.1 Detailed Description

File containing classes representing messages of the single byte protocol for the 3DM-GX3-25

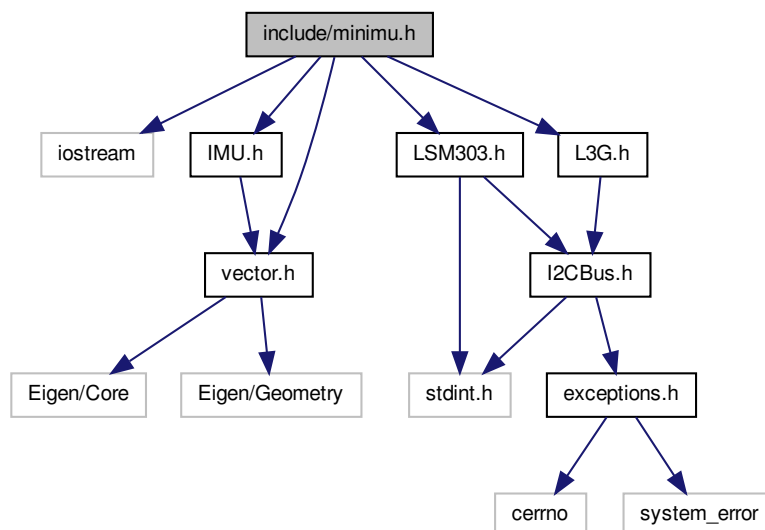

Author

Jan Sommer Created on: Apr 25, 2013

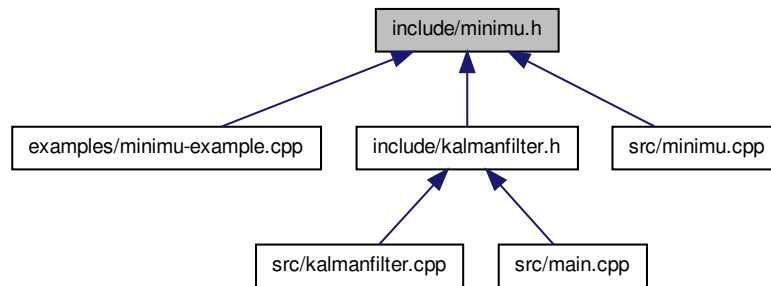

Definition in file [messages.h](#).

9.23 include/minimu.h File Reference

```
#include <iostream> #include "IMU.h" #include "LSM303.h" ×  
#include "L3G.h" #include "vector.h" Include dependency graph for  
minimu.h:
```

This graph shows which files directly or indirectly include this file:

Classes

- class [USU::MinImu](#)

Class to manage the communication to the Pololu MinIMU9.

Namespaces

- namespace [USU](#)

TODO: Make some proper exceptions.

9.23.1 Detailed Description

C++ MinIMU9v2.

Author

Jan Sommer Created on: Apr 20, 2013

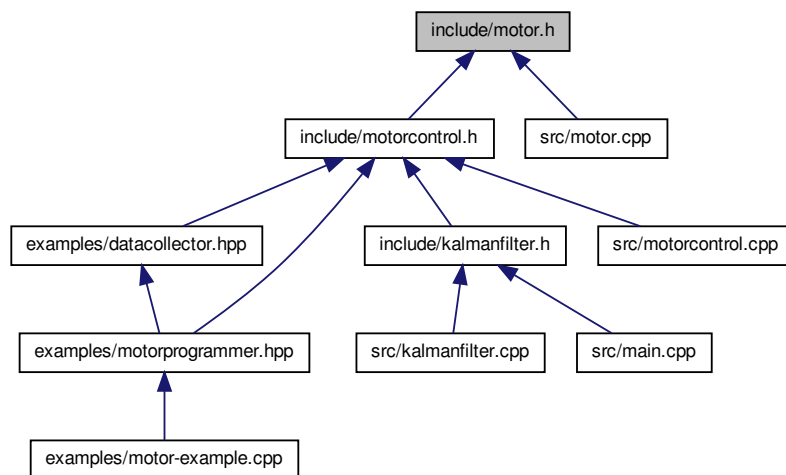

Definition in file [minimu.h](#).

9.24 include/motor.h File Reference

`#include "cPWM.h" #include "Beagle_GPIO.h"` Include dependency graph for motor.h:

This graph shows which files directly or indirectly include this file:

Classes

- class [USU::Motor](#)

Class which represents a motor.

Namespaces

- namespace [USU](#)

TODO: Make some proper exceptions.

Typedefs

- typedef void([cPWM::SetDutyCycle](#))(unsigned int)

Function-pointer to the SetDutyCycle-method of [cPWM](#) class.

9.24.1 Detailed Description

Class to represent a motor

Author

Jan Sommer Created on: Apr 22, 2013

Definition in file [motor.h](#).

9.24.2 Typedef Documentation

9.24.2.1 typedef void([cPWM::SetDutyCycle](#))(unsigned int)

Function-pointer to the SetDutyCycle-method of [cPWM](#) class.

Each [cPWM](#) object has 2 channels (A and B). Each motor gets assigned to one of the channels using the corresponding function pointer.

Definition at line 23 of file motor.h.

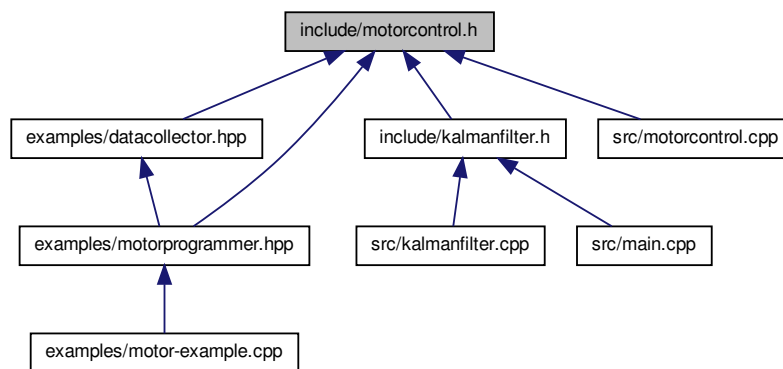

9.25 include/motorcontrol.h File Reference

```
#include <vector>    #include "cPWM.h"    #include "Beagle_-\nGPIO.h"    #include "motor.h"    #include "max127.h"    #include
```

"messages.h" Include dependency graph for motorcontrol.h:

This graph shows which files directly or indirectly include this file:

Classes

- class [USU::MotorControl](#)
Represents the class for motor control.

Namespaces

- namespace [USU](#)
TODO: Make some proper exceptions.

9.25.1 Detailed Description

C++ class for the calculation of the control response. Based on the PeriodicRtThread class.

Author

Jan Sommer Created on: Apr 22, 2013

Definition in file [motorcontrol.h](#).

9.26 include/periodicrtthread.h File Reference

`#include "RtThread.h"` Include dependency graph for periodicrtthread.h:

This graph shows which files directly or indirectly include this file:

Classes

- class [USU::PeriodicRtThread](#)

TODO: Make some proper exceptions.

Namespaces

- namespace [USU](#)

TODO: Make some proper exceptions.

9.26.1 Detailed Description

Small C++ wrapper class to create a realtime scheduled pthread with periodic timer events.

Author

Jan Sommer Created on: Apr 10, 2013

Definition in file [periodicrtthread.h](#).

9.27 include/RtThread.h File Reference

`#include <pthread.h>` Include dependency graph for RtThread.h:

This graph shows which files directly or indirectly include this file:

Classes

- class [USU::RtThread](#)

Abstract wrapper class for the pthread library with RT-priority.

Namespaces

- namespace [USU](#)

TODO: Make some proper exceptions.

9.27.1 Detailed Description

Small C++ wrapper class to create a realtime scheduled pthread

Author

Jan Sommer Created on: Apr 10, 2013

Definition in file [RtThread.h](#).

9.28 include/semaphore.h File Reference

`#include <semaphore.h> #include <system_error>` Include dependency graph for semaphore.h:

This graph shows which files directly or indirectly include this file:

**Classes**

- class [USU::Semaphore](#)
Wrapper class for semaphores.

Namespaces

- namespace [USU](#)

TODO: Make some proper exceptions.

9.28.1 Detailed Description

Small wrapper class for semaphore

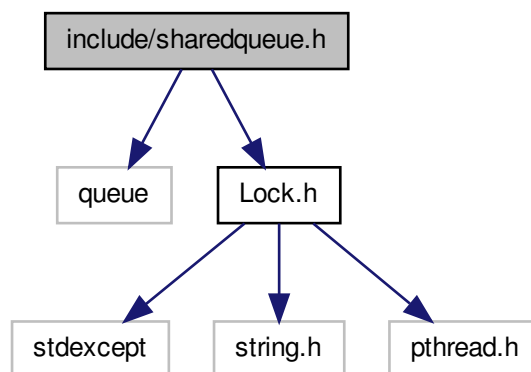

Author

Jan Sommer Created on: Apr 30, 2013

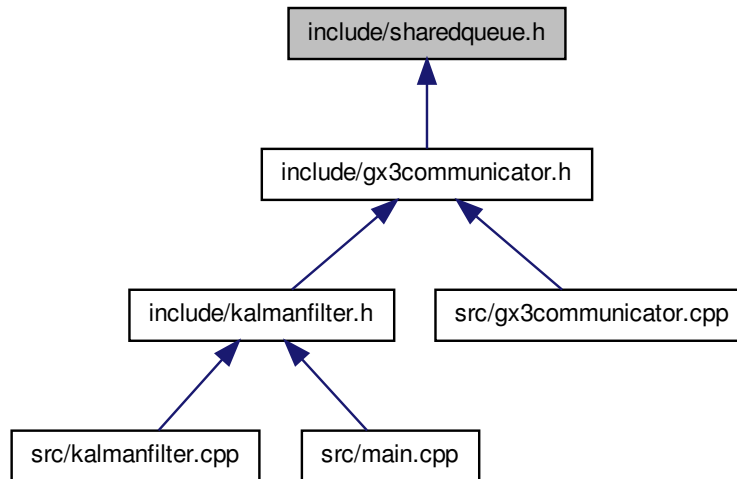

Definition in file [semaphore.h](#).

9.29 include/sharedqueue.h File Reference

`#include <queue> #include "Lock.h"` Include dependency graph for sharedqueue.h:

This graph shows which files directly or indirectly include this file:

Classes

- class `USU::SharedQueue< T >`
Wrapper class to make `std::queue` thread safe.

Namespaces

- namespace `USU`
TODO: Make some proper exceptions.

9.29.1 Detailed Description

Small wrapper class to make `std::queue` thread safe in the sense of the single producer, single consumer problem.

Author

Jan Sommer Created on: May 2, 2013

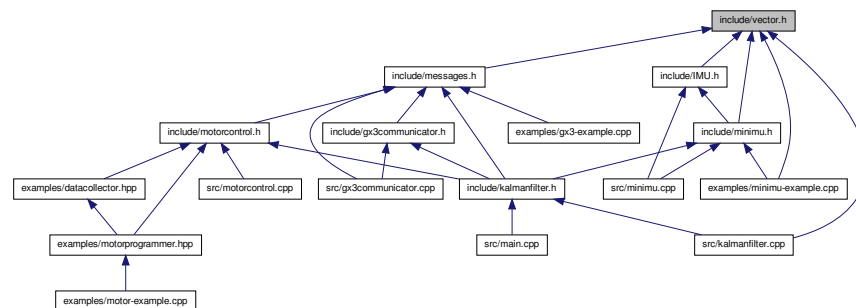

Definition in file `sharedqueue.h`.

9.30 include/vector.h File Reference

`#include "Eigen/Core" #include "Eigen/Geometry"` Include dependency graph for `vector.h`:

This graph shows which files directly or indirectly include this file:

Typedefs

- typedef Eigen::Vector3f [vector](#)
- typedef Eigen::Vector3i [int_vector](#)
- typedef Eigen::Matrix3f [matrix](#)
- typedef Eigen::Quaternionf [quaternion](#)

9.30.1 Typedef Documentation

9.30.1.1 typedef Eigen::Vector3i int_vector

Definition at line 7 of file vector.h.

9.30.1.2 typedef Eigen::Matrix3f matrix

Definition at line 8 of file vector.h.

9.30.1.3 typedef Eigen::Quaternionf quaternion

Definition at line 9 of file vector.h.

9.30.1.4 typedef Eigen::Vector3f vector

Definition at line 6 of file vector.h.

9.31 src/Beagle_GPIO.cpp File Reference

```

dency graph for kalmanfilter.cpp:
```

Functions

- int [timeval_subtract](#) (struct timeval *result, struct timeval *x, struct timeval *y)

9.35.1 Detailed Description

C++ class for the sensor fusion and stated estimated. Based on the PeriodicRtThread class.

Author

Jan Sommer Created on: Apr 20, 2013

Definition in file [kalmanfilter.cpp](#).

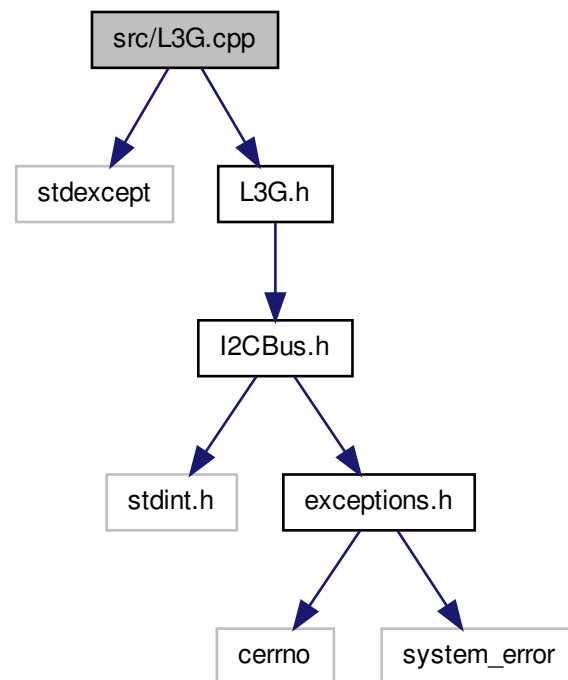

9.35.2 Function Documentation

9.35.2.1 int [timeval_subtract](#) (struct timeval * *result*, struct timeval * *x*, struct timeval * *y*)

Definition at line 26 of file kalmanfilter.cpp.

9.36 src/L3G.cpp File Reference

`#include <stdexcept> #include "L3G.h"` Include dependency graph for L3G.cpp:

Defines

- `#define L3G4200D_ADDRESS_SA0_LOW (0xD0 >> 1)`
- `#define L3G4200D_ADDRESS_SA0_HIGH (0xD2 >> 1)`
- `#define L3GD20_ADDRESS_SA0_LOW (0xD4 >> 1)`
- `#define L3GD20_ADDRESS_SA0_HIGH (0xD6 >> 1)`

9.36.1 Define Documentation

9.36.1.1 `#define L3G4200D_ADDRESS_SA0_HIGH (0xD2 >> 1)`

Definition at line 5 of file `L3G.cpp`.

9.36.1.2 `#define L3G4200D_ADDRESS_SA0_LOW (0xD0 >> 1)`

Definition at line 4 of file L3G.cpp.

9.36.1.3 `#define L3GD20_ADDRESS_SA0_HIGH (0xD6 >> 1)`

Definition at line 7 of file L3G.cpp.

9.36.1.4 `#define L3GD20_ADDRESS_SA0_LOW (0xD4 >> 1)`

Definition at line 6 of file L3G.cpp.

9.37 src/LSM303.cpp File Reference

`#include "LSM303.h"` Include dependency graph for LSM303.cpp:

Defines

- #define [MAG_ADDRESS](#) (0x3C >> 1)
- #define [ACC_ADDRESS_SA0_A_LOW](#) (0x30 >> 1)
- #define [ACC_ADDRESS_SA0_A_HIGH](#) (0x32 >> 1)

9.37.1 Define Documentation

9.37.1.1 #define ACC_ADDRESS_SA0_A_HIGH (0x32 >> 1)

Definition at line 20 of file LSM303.cpp.

9.37.1.2 #define ACC_ADDRESS_SA0_A_LOW (0x30 >> 1)

Definition at line 19 of file LSM303.cpp.

9.37.1.3 #define MAG_ADDRESS (0x3C >> 1)

Definition at line 18 of file LSM303.cpp.

9.38 src/main.cpp File Reference

```
#include <csignal> #include <cstdlib> #include <unistd.-
h> #include <iostream> #include <string> #include "tclap/-
CmdLine.h" #include "kalmanfilter.h" Include dependency graph for
main.cpp:
```

Functions

- TCLAP::CmdLine [cmd](#) ("Program for the attitude determination and control of the USU simulation table",',',0.1")
- TCLAP::ValueArg< string > [trajFile](#) ("","trajfile","Input file for the trajectory the table should follow", false,"input.txt","filename")
- TCLAP::ValueArg< float > [pgain](#) ("","pgain","The P-Gain for the simple proportional speed controller", false, 1.0,"float")
- TCLAP::ValueArg< string > [mode](#) ("","mode", modeText, true, string(),"mode name")
- void [endProgram](#) (int s)
- int [main](#) (int argc, char **argv)

Variables

- const string `modeText`
- `KalmanFilter kalmanFilter` (5, 20000, "/dev/i2c-2", "/dev/i2c-3")

9.38.1 Function Documentation

9.38.1.1 `TCLAP::CmdLine cmd ("Program for the attitude determination and control of the USU simulation table", ' ', "0.1")`

9.38.1.2 `void endProgram (int s)`

Definition at line 35 of file main.cpp.

9.38.1.3 `int main (int argc, char ** argv)`

Definition at line 43 of file main.cpp.

9.38.1.4 `TCLAP::ValueArg<string> mode ("", "mode", modeText, true, string(), "mode name")`

9.38.1.5 `TCLAP::ValueArg<float> pgain ("", "pgain", "The P-Gain for the simple proportional speed controller", false, 1.0, "float")`

9.38.1.6 `TCLAP::ValueArg<string> trajFile ("", "trajfile", "Input file for the trajectory the table should follow", false, "input.txt", "filename")`

9.38.2 Variable Documentation

9.38.2.1 `KalmanFilter kalmanFilter`(5, 20000, "/dev/i2c-2", "/dev/i2c-3")

9.38.2.2 `const string modeText`

Initial value:

```
string("Operation mode: \n\t") +
    string("- pololu: Collect data from Pololu IMU
and print it in csv format\n\t") +
    string("- microstrain: Collect data from
MicroStrain IMU and print it in csv format\n\t") +
    string("- collect: Collect data from both IMUs
and print it in csv format\n\t") +
    string("- simpleControl: Run simple angular
velocity control scheme")
```

Definition at line 14 of file main.cpp.

9.39 src/max127.cpp File Reference
